## Wayward Black- And-White Warbler

### Beautifying the Landscape

In early 2015, in advance of the bird breeding season, 1000 new shrubs and 250 new trees will be planted around the Kellogg Creek Water Pollution Control Plant.

### Tree Removal

To make way for the new plantings, 60 trees, most of which are in poor health or dying, as well as many of the shrubs along the McLoughlin Boulevard-facing fence will be removed.

### Black-and-White Warbler

Tree removal was to begin the week of Jan. 12. Due to the arrival of an unexpected migratory bird, the Black-and-White Warbler, that was postponed. The avian traveler, from northern and eastern North America, is off-track and has garnered much public attention and interest.

### Schedule

To allow time for bird enthusiasts to view the bird, tree removal was delayed until the week of Jan. 19. At that time, designated trees on the northeast corner of the property will be removed.

Tree removal will now proceed clockwise and conclude at the western border to offer the bird a chance to move on.

### Safety

Please be aware that crews will be working throughout in the area and there will be falling trees. For your safety, please abide by barricades, signs and trail closures. Thank you.
