Kellogg Good Neighbor Committee Frequently Asked Questions

What is the Kellogg Good Neighbor Committee and Good Neighbor Fund?

The Kellogg Good Neighbor Committee was created by a Milwaukie City council resolution in 2013. The committee's purpose is to recommend to the council how the "Good Neighbor Fund" should be prioritized and spent. The Good Neighbor Fund helps mitigate the impact that the Kellogg Creek Water Pollution Control Plant (WPCP) has on the surrounding neighborhoods.

The Fund was established through an Intergovernmental Agreement between the City of Milwaukie and Clackamas County Service District No.1 (the district) for the provision of wastewater treatment services.

The district deposits \$1.00 per month for each of the city's connections (approximately \$11,000). These funds are to be used for Good Neighborrelated projects at and around the Kellogg Creek WPCP. The district also contributed \$1M as "seed" funding to the Good Neighbor Fund for odor control and reduction projects at the Kellogg Creek WPCP.

What are the current priorities of the Kellogg Good Neighbor Committee?

The Kellogg Good Neighbor Committee's current priorities include: odor control and reduction, a landscaping project to beautify the landscape and control air flow odor (approximately \$200k + \$40k in design fees), and path lighting.

What is the status of the Landscaping Project?

In June 2014, more than 30 residents attended an open house event to review and provide input on the landscaping project, which calls for species of trees and shrubs that will help beautify the landscape surrounding Kellogg Creek WPCP as well as help control odor.

In early 2015, in advance of the spring bird nesting season, 1000 new shrubs and 250 new trees will be planted around Kellogg Creek WPCP.

To make way for the new plantings, approximately 60 trees, most of which are in poor health or dying, will be removed, and many of the shrubs that line the McLoughlin Boulevard-facing fence will be removed. Until the new shrubs and trees are planted and have time to grow, a fabric lining along the fence will help to screen views of the plant.

What is the wastewater agreement between the City of Milwaukie and Clackamas County Service District No.1?

In 2012, the Clackamas County Board of County Commissioners, the governing board for the district, signed a 25-year wastewater treatment agreement with the City of Milwaukie.

The agreement settled long-standing issues between the city and the district, which included the following:

- "Good Neighbor" policy representing businesses and residents near Kellogg Creek WPCP
- District and city customers pay the same rate for wastewater treatment
- 7-year land use dispute settled
- District agreed to allocate \$1M towards odor control improvements
- New Development in Milwaukie to contribute to the wastewater treatment system

How is the district spending the \$1M regarding odor control?

The district has used approximately \$90,000 of the \$1M seed fund to evaluate sources of odors and solicit recommendations for effective odor control.

The Kellogg Good Neighbor Committee will review the options and narrow recommendations for the Milwaukie City Council, who may then request that the district pursue various odor control projects.

With the assistance of outside experts, the committee and the district will identify a handful of feasible infrastructure upgrades to measurably control odor from the plant.

NEW Kellogg Odor Hotline: 503-557-6367

Call the Odor Control Hotline, 503-557-6367, to report odor that you believe may be related to wastewater treatment at the Kellogg Creek WPCP. District staff will promptly investigate concerns.

What phone number should I call in an emergency?

If you have a concern about a sewage spill, flooding, or pollution of any stream or ground water, you should call 503-742-4567 Monday -Thursday, 7:30 a.m. to 5:30 p.m. For calls after hours that are non-life threatening, please call 503-655-8211.

About Kellogg Creek Water Pollution Control Plant

The Kellogg Creek WPCP serves much of the North Clackamas area, and is located along the Willamette River in Milwaukie, Oregon.

Location:11525 SE McLoughlin Blvd., Milwaukie, Oregon

Service Area: Unincorporated North Clackamas County, Happy Valley, portions of Damascus and the City of Milwaukie and Johnson City

Design Capacity: 10.0 million gallons per day (dry weather flow)

Average Flow: 8.02 million gallons per day (dry weather flow)

Major Processes: Activated sludge, secondary treatment, anaerobic digestion, and ultraviolet disinfection
