

Milwaukie City Council

COUNCIL WORK SESSION

AGENDA

City Hall Council Chambers, 10722 SE Main Street & Zoom Video Conference (<u>www.milwaukieoregon.gov</u>) AUGUST 1, 2023

Council will hold this meeting in-person and through video conference. The public may attend the								
meeting by coming to City Hall or joining the Zoom webinar, or watch the meeting on the city's YouTube								
channel or Comcast Cable channel 30 in city limits. For Zoom login	visit							
https://www.milwaukieoregon.gov/citycouncil/city-council-work-session-330.								
To participate in this meeting by phone dial 1-253-215-8782 and enter Webinar ID 897 8131 1965 and Passcode: 519687. To raise hand by phone dial *9.								
Written comments may be delivered to City Hall or emailed to <u>ocr@milwaukieoregon.gov</u> . Council may take limited verbal comments.								
Note: agenda item times are estimates and are subject to change. Page #								
1 Natural Hazard Mitigation Plan (NHMP) Update – Discussion (4:00 pm)	1							

- Natural Hazard Mitigation Plan (NHMP) Update Discussion (4:00 p.m.)

- Council Planning Commission (PC) Meeting Joint Session (4:30 p.m.)
 Staff: Laura Weigel, Planning Manager
- **3. Adjourn** (5:30 p.m.)

Meeting Accessibility Services and Americans with Disabilities Act (ADA) Notice

The city is committed to providing equal access to public meetings. To request listening and mobility assistance services contact the Office of the City Recorder at least 48 hours before the meeting by email at <u>ocr@milwaukieoregon.gov</u> or phone at 503-786-7502. To request Spanish language translation services email <u>espanol@milwaukieoregon.gov</u> at least 48 hours before the meeting. Staff will do their best to respond in a timely manner and to accommodate requests. Most Council meetings are broadcast live on the <u>city's YouTube channel</u> and Comcast Channel 30 in city limits.

Servicios de Accesibilidad para Reuniones y Aviso de la Ley de Estadounidenses con Discapacidades (ADA)

La ciudad se compromete a proporcionar igualdad de acceso para reuniones públicas. Para solicitar servicios de asistencia auditiva y de movilidad, favor de comunicarse a la Oficina del Registro de la Ciudad con un mínimo de 48 horas antes de la reunión por correo electrónico a <u>ocr@milwaukieoregon.gov</u> o llame al 503-786-7502. Para solicitar servicios de traducción al español, envíe un correo electrónico a <u>espanol@milwaukieoregon.gov</u> al menos 48 horas antes de la reunión. El personal hará todo lo posible para responder de manera oportuna y atender las solicitudes. La mayoría de las reuniones del Consejo de la Ciudad se transmiten en vivo en el <u>canal de YouTube de la ciudad</u> y el Canal 30 de Comcast dentro de los límites de la ciudad.

Executive Sessions

The City Council may meet in executive session pursuant to Oregon Revised Statute (ORS) 192.660(2); all discussions are confidential; news media representatives may attend but may not disclose any information discussed. Final decisions and actions may not be taken in executive sessions.

COUNCIL STAFF REPORT

To: Mayor and City Council Ann Ober, City Manager WS 1. 8/1/23

OCR USE ONLY

Date Written: July 18, 2023

Reviewed: Emma Sagor, Assistant City Manager

From: Dan Harris, Events & Emergency Management Coordinator

Subject: Natural Hazard Mitigation Plan Update

ACTION REQUESTED

Council is asked to review the 2023/24 draft update to the Natural Hazard Mitigation Plan (NHMP) and provide feedback on the plan. In particular, feedback on the action items contained in the NHMP is requested.

HISTORY OF PRIOR ACTIONS AND DISCUSSIONS

January 21, 2020: Council adopted the previous update of the city's NHMP.

Milwaukie's NHMP is an addendum to Clackamas County's NHMP. Milwaukie's first NHMP was adopted in 2003. The county and city plans were updated in 2013 and in 2019. Updates are required by the Federal Emergency Management Agency (FEMA) every five years.

Events and Emergency Management Coordinator Dan Harris served as the NHMP addendum coordinator during the 2023/24 update process. Staff representatives from the city's Hazard Mitigation Advisory Committee (HMAC) worked throughout the first half of 2023 to review and revise the city's addendum with a focus on the NHMP's risk assessment and mitigation strategy.

The proposed addendum reflects decisions made at the HMAC meetings and during subsequent work and communication with the county's resilience coordinator. The Milwaukie Public Safety Advisory Committee (PSAC) and leaders of the Milwaukie Community Emergency Response Team have also been given the opportunity to review earlier drafts of the NHMP. Other documented changes include a revision of the NHMP mission and goals, action items, and community profile.

ANALYSIS

The NHMP is intended to assist the city in reducing the risk from hazards by identifying resources, information, and strategies for risk reduction. It is also intended to guide and coordinate mitigation activities throughout the city. A risk assessment consists of three phases: hazard identification, vulnerability assessment, and risk analysis.

By identifying and understanding the relationship between hazards, vulnerable systems, and existing capacity, the city is better equipped to identify and implement actions aimed at reducing the overall risks.

In addition to establishing a comprehensive community-level mitigation strategy, the Disaster Mitigation Act of 2000 (DMA2K) and the regulations contained in 44 CFR 201 require that

jurisdictions maintain an approved NHMP to receive federal funds for mitigation projects. Local adoption and federal approval of this NHMP ensures that the city will remain eligible for predisaster mitigation and post-disaster recovery project grants.

Because Milwaukie's NHMP is an addendum to Clackamas County's NHMP, several aspects of the city's plan must mirror those of the county. These include items like mission, goals, format, and specific hazards. The city has more flexibility when considering its own assets, specific vulnerabilities, and its action items. The number of action items has been reduced from 13 to eight. This was possible due to the completion of some items and the consolidation of others. High priority action items were identified based on their feasibility and the magnitude of the effect they are expected to have on the city's overall disaster readiness.

Next Steps

Members of city staff are conducting public engagement throughout August 2023. This will primarily occur through the Engage Milwaukie platform, but public comments will also be solicited through the Pilot newsletter, the city website and social media, and direct contact with interested community groups.

Clackamas County has requested that cities submit their draft plans by the end of September 2023. The county will then send the compiled update, including the County NHMP and its addenda to the Oregon Office of Emergency Management (OEM) for review. Clackamas County expects to have the reviewed document back by mid-November. Cities will have another opportunity to adjust their plans based on any OEM notes. The county intends to submit its updated plan and addenda to FEMA for review and approval in December. If approved by FEMA, the plan will return to Council for adoption in early 2024.

BUDGET IMPACT

Staff does not anticipate an increase in cost due to the adoption of an updated NHMP. Although some of the action items included in the plan have costs that exceed the current budget, the events & emergency management coordinator will continue to seek out grant funding opportunities. Some action items, including the removal of Kellogg Dam listed as part of the Flood action item (FL1) will be contingent on funding from grants and other sources.

WORKLOAD IMPACT

The action items listed as being led by Emergency Management will be an important part of the work plan for the events & emergency management coordinator over the lifecycle of this NHMP. Other items are not expected to create a significant workload impact because they will be accomplished in the normal course of work for the departments leading them.

CLIMATE IMPACT

Climate and natural hazards are inextricably entwined. Anthropogenic climate change has observably exacerbated most of the hazards examined in this plan. City staff will continue to apply a climate lens when considering ways to implement action items. Multi-Hazard Action Item 5 involves continuing to support the implementation of the Community Climate Action Plan.

COORDINATION, CONCURRENCE, OR DISSENT

The HMAC, consisting of representatives from Building, Engineering, Planning, Police, Public Works, and the City Manager's Office have had the opportunity to review this plan. No dissent has been noted.

STAFF RECOMMENDATION

N/A, no action is being taken.

Purpose

This is an update of the Milwaukie addendum to the Clackamas County Multi-Jurisdictional Natural Hazard Mitigation Plan (NHMP). This addendum supplements information contained in Volume I (Basic Plan) which serves as the NHMP foundation and Volume III (Appendices) which provide additional information. This addendum meets the following requirements:

- Multi-Jurisdictional Plan Adoption §201.6(c)(5),
- Multi-Jurisdictional Participation §201.6(a)(3),
- Multi-Jurisdictional Mitigation Strategy §201.6(c)(3)(iv) and
- Multi-Jurisdictional Risk Assessment §201.6(c)(2)(iii).

Milwaukie adopted their addendum to the Clackamas County Multi-jurisdictional NHMP on [Month] [Day]. 2023. FEMA Region X approved the Clackamas County NHMP on [Month] [Day], 2023 and the City's addendum on [Month] [Day], 2023.

Mitigation Plan Mission

The NHMP mission states the purpose and defines the primary functions of the NHMP. It is intended to be adaptable to any future changes made to the NHMP and need not change unless the community's environment or priorities change.

The City concurs with the mission statement developed during the Clackamas County planning process (Volume I, Section 3):

"Enhance county resiliency and capacity to address natural hazards by promoting sound public policy and effective mitigation strategies designed to equitably reduce risk and impacts on community members, community lifelines, historic and cultural resources, property, and ecological systems."

This can be achieved by increasing public awareness, documenting the resources for risk reduction and loss-prevention, and identifying activities to guide the county towards building a safer, more sustainable community.

Mitigation Plan Goals

Mitigation plan goals are more specific statements of direction that Clackamas County citizens and public and private partners can take while working to reduce the city's risk from natural hazards. These statements of direction form a bridge between the broad mission statement and action items. The goals listed here serve as checkpoints as agencies and organizations begin implementing mitigation action items.

The City concurs with the goals developed during the Clackamas County planning process (Volume I, Section 3). All NHMP goals are important and are listed below in no order of priority. Establishing community priorities within action items neither negates nor eliminates any goals, but it establishes which action items to consider implementing first, should funding become available.

Below is a list of the NHMP goals:

GOAL #1: PROTECT LIFE AND PROPERTY

- Develop and implement mitigation and climate adaptation projects and policies that aid in protecting lives by making homes, businesses, community lifelines, and other property more resilient to natural hazards and impacts from climate change.
- Establish mitigation projects and policies that minimize losses and repetitive damages from recurring disasters while promoting insurance coverage for severe hazards.
- Improve hazard identification and risk assessment information to inform and provide recommendations for enhanced resilience in new development decisions and promote preventative measures for existing development in areas vulnerable to natural hazards.

GOAL #2: ENHANCE NATURAL SYSTEMS

• Incorporate natural hazard mitigation planning and activities into watershed planning, natural resource management, natural systems enhancement, and land use planning to protect life, property, and ecological system.

GOAL #3: AUGMENT EMERGENCY SERVICES

 Strengthen emergency operations by enhancing communication, collaboration, and coordination of natural hazard mitigation activities and policies across agencies at all levels and regions of government, sovereign tribal nations, and the private sector.

GOAL #4: ENCOURAGE PARTNERSHIPS FOR IMPLEMENTATION

- Improve communication, coordination, and participation among and with public agencies, community members, community lifelines, and private sector organizations to prioritize and implement hazard mitigation activities and policies.
- Enhance efforts toward identifying and optimizing opportunities across state agencies, surrounding communities, and private entities for resource sharing, mutual aid, and funding sources/support.

GOAL #5: PROMOTE PUBLIC AWARENESS

• Build community resilience and awareness and reduce the effects of natural hazards and climate change through community-wide engagement, collaboration, resource-sharing, learning, leadership-building, and identifying mitigation project-related funding opportunities.

GOAL #6: ADVANCE EQUITY AND INCLUSION IN MITIGATION PLANNING

- Mitigate the inequitable impacts of natural hazards by prioritizing the directing of resources and efforts to build resilience and engagement in the most vulnerable communities least able to prepare, respond, and recover.
- Strengthen efforts aimed at increasing engagement, outreach, and collaboration with community and cultural organizations and agencies that are dedicated to providing services and support to vulnerable and underserved communities.

NHMP Process, Participation and Adoption

This section of the NHMP addendum addresses 44 CFR 201.6(c)(5), *Plan Adoption*, and 44 CFR 201.6(a)(3), *Participation*.

Milwaukie first developed an addendum to Clackamas County's Natural Hazards Mitigation Plan in 2003. This plan was updated in 2009, 2012/2013, and in 2018/2019.

In addition to establishing a comprehensive community-level mitigation strategy, the Disaster Mitigation Act of 2000 (DMA2K), and the regulations contained in 44 CFR 201, require that jurisdictions maintain an approved NHMP to receive federal funds for mitigation projects. Local adoption, and federal approval of this NHMP ensures that the city will remain eligible for pre-, and post-disaster mitigation project grants.

The Oregon Partnership for Disaster Resilience (OPDR) at the University of Oregon's Institute for Policy Research, and Engagement (IPRE) collaborated with the Oregon Office of Emergency Management (OEM), Clackamas County, and Milwaukie to update their NHMP. This project is funded through the Federal Emergency Management Agency's (FEMA) Fiscal-Year 2016 (FY16) Pre-Disaster Mitigation (PDM) Competitive Grant Program EMS-2017-PC-0005 (PDMC-PL-10-OR-2016-001). Members of the Milwaukie NHMP Hazard Mitigation Advisory Committee (HMAC) also participated in the County NHMP update process (Volume III, Appendix B).

The Clackamas County NHMP, and Milwaukie addendum, are the result of a collaborative effort between citizens, public agencies, non-profit organizations, the private sector, and regional organizations. The Milwaukie HMAC guided the process of developing the NHMP.

Convener

The City's Events & Emergency Management Coordinator served as the convener of the HMAC. They will continue to serve as the convener during the implementation and maintenance phase and during the next plan update. The convener of the NHMP will take the lead in implementing, maintaining and updating the addendum to the Clackamas County NHMP in collaboration with the designated convener of the Clackamas County NHMP (Clackamas County Resilience Coordinator).

Representatives from the City of Milwaukie HMAC met formally and informally to discuss updates to their addendum (Volume III, Appendix B). The HMAC reviewed and revised the City's addendum, with focus on the NHMP's risk assessment and mitigation strategy (action items).

This addendum reflects decisions made at the designated meetings and during subsequent work and communication with the Clackamas County Resilience Coordinator and the OPDR. The changes are highlighted with more detail throughout this document and within Volume III, Appendix B. Other documented changes include a revision of the City's risk assessment and hazard identification sections, NHMP mission and goals, action items, and community profile.

The Milwaukie HMAC comprises the following representatives:

- Convener, Dan Harris, Events & Emergency Management Coordinator
- Luke Strait, Police Chief

- Robbie Graves, Police Captain
- Damien Farwell, Fleet and Facilities Supervisor
- Nick Lindekugel, GIS Coordinator
- Natalie Rogers, Climate and Natural Resources Manager
- Peter Passarelli, Public Works Director
- Steve Adams, City Engineer
- Jen Garbely, Assistant City Engineer
- Patrick McLeod, Building Official
- Joseph Briglio, Community Development Director
- Brett Kelver, Senior Planner

Public participation occurred with the assistance of the city's Public Safety Advisory Committee and a public comment period in summer 2023 during which time the NHMP shared through the City's website and social media. The HMAC served as the local review body for the NHMP's development.

NHMP Implementation and Maintenance

The City Council will be responsible for adopting the Milwaukie addendum to the Clackamas County NHMP. This addendum designates an HMAC and a convener to oversee the development and implementation of action items. Because the City addendum is part of the County's multi-jurisdictional NHMP, the City will look for opportunities to partner with the County. The City's HMAC will convene after re-adoption of the Milwaukie NHMP addendum on an annual schedule. The County is meeting on a semi-annual basis and will provide opportunities for the cities to report on NHMP implementation and maintenance during their meetings. The City's Events and Emergency Management Coordinator will serve as the convener and will be responsible for assembling the HMAC. The HMAC will be responsible for:

- Reviewing existing action items to determine suitability of funding;
- Reviewing existing and new risk assessment data to identify issues that may not have been identified at NHMP creation;
- Educating and training new HMAC members on the NHMP and mitigation actions in general;
- Assisting in the development of funding proposals for priority action items;
- Discussing methods for continued public involvement; and
- Documenting successes and lessons learned during the year.

The convener will also remain active in the County's implementation and maintenance process (Volume I, Section 4).

The City will utilize the same action item prioritization process as the County (Volume I, Section 4).

Implementation through Existing Programs

This NHMP is strategic and non-regulatory in nature, meaning that it does not necessarily set forth any new policy. It does, however, provide: (1) a foundation for coordination and collaboration among agencies and the public in the city; (2) identification and prioritization of future mitigation activities; and (3) aid in meeting federal planning requirements and

qualifying for assistance programs. The mitigation plan works in conjunction with other City plans and programs including the Comprehensive Plan, Capital Improvement Plan, and Building Codes, as well as the <u>Clackamas County NHMP</u>, and the <u>State of Oregon NHMP</u>.

The mitigation actions described herein (and in Attachment A) are intended to be implemented through existing plans and programs within the city. Plans and policies already in existence have support from residents, businesses and policy makers. Many land-use, comprehensive and strategic plans get updated regularly, allowing them to adapt to changing conditions and needs. Implementing the NHMP's action items through such plans and policies increases their likelihood of being supported and implemented. Implementation opportunities are further defined in action items when applicable.

Milwaukie's acknowledged comprehensive plan is the 2020 City of Milwaukie Comprehensive Plan. The City implements the plan through the development code.

Milwaukie currently has the following plans, regulations, and projects that relate to natural hazard mitigation. For a complete list visit the City's <u>website</u> and <u>General City Maps</u>:

- Comprehensive Plan
 - Land Use Map (Additional Planning Documents)
- <u>Municipal Code</u> (Ord. 1686, July 9, 2018)
 - Title 13: Public Services
 - $\circ~$ Title 15: Buildings and Construction
 - o Title 16: Environment
 - Title 17: Land Division
 - Title 18: Flood Hazard Areas (SFHA and 1996 flood inundation area)
 - $\circ~$ Title 19: Zoning
 - $\circ~$ Title 21: Utility Service
- Capital Improvement Plan (2023-2028)
- Disaster Debris Management Plan (Metro)
- Milwaukie Community Climate Action Plan
- Emergency Operations Plan
- <u>Transportation System Plan</u>
 O Portland Metro 2014 Regional Transportation Plan
- Stormwater Master Plan
- Urban Forest Plan
- Wastewater Master Plan
- Water System Master Plan

Other plans:

- Clackamas County Community Wildfire Protection Plan
 - <u>Clackamas Fire District #1</u>

Government Structure

The City of Milwaukie has a council-manager form of government. The city council consists of five members: a mayor and four councilors. The mayor presides over council meetings. The mayor and city council members are elected to four-year terms of office through a citywide general election. The city council is responsible for identifying problems and needs within the community and then addressing those problems through community goals and objectives.

The City of Milwaukie currently has the following departments which have a role in natural hazard mitigation:

Office of the City Manager is responsible for taking charge of the daily supervision of City affairs. The Events & Emergency Management Coordinator is assigned to this department.

Community Development oversees the following departments and services: Planning and Building.

The **Planning Division** regulates growth and development in the city of Milwaukie by administering the City's Comprehensive Plan and Municipal Code related to zoning and land division. Tasks range from implementing existing zoning regulations to assisting City Council with land use and growth planning policy development. Planning is also responsible for regulating development impacts in natural resource areas.

The **Building Division** is responsible for plan review and inspections on commercial, industrial and residential developments, as well as fire life and safety plan review.

The **Engineering Department** provides quality engineering services to ensure that all city utilities, including wastewater collection, water, streets and storm water infrastructure, meet all municipal code requirements, are efficiently managed at the lowest cost to ratepayers, and serve the long-term needs of the community. In addition, the Engineering Department provides floodplain management and regulation for the City.

The **Public Works Department** provides many of the basic urban services to the citizens of Milwaukie including the following:

The **Stormwater Division** continues regular sewer line cleaning and inspection. The Stormwater division maintains all the components that comprise the City's Stormwater infrastructure, valued at over \$6,094,886. The various components of the system include: 1190 catch basins, 548 manholes, 62 sedimentation-manholes, 197 drywells, 37 miles of pipe and open ditches, and 5 detention ponds. It uses information from inspections for ongoing analysis of the sewer system components and capital needs assessment, and on the spot pipe rehabilitation to minimize sewer back-ups. It also ensures that the city complies with the National Discharge Elimination System (NPDES) permit. The division monitors pollutants in surface water.

The **Wastewater Division** is responsible for the supply and distribution of drinking water. The Wastewater division maintains all the components that comprise the City's Wastewater infrastructure, valued at over \$7,029,552. The various components of the system include: 75 miles of sanitary sewer, 5 lift stations, and 1,607 manholes.

The **Water Division** is responsible for the supply and distribution of drinking water. The Water division maintains all the components that comprise the city's infrastructure, valued at over \$16,516,356. The various components of the system include: 100 miles of water main, 964 fire hydrants, 6,911 water services, 7 well houses, 3 storage reservoirs and 4 pump stations. The division ensures that the city's water storage and distribution systems comply with all state and federal regulations.

The **Streets Division** maintains all the components that comprise the City's infrastructure, valued at over \$ 38,785,042. The various components of the system include: 75 miles of road surface, signage and street pavement markings.

The **Fleet Division** maintains all the City's vehicles and equipment including police cars, sweepers, excavators, dump trucks and 150 pieces of small equipment and generators. And, the **Facilities Division** is responsible for maintaining all city facilities.

Public Safety is committed to providing quality services to the Milwaukie community. Police services are provided by the **Police Department. Code Enforcement** is responsible for neighborhood preservation, code compliance, and nuisance abatement.

Fire services are provided by Clackamas Fire District #1.

Continued Public Participation

An open public involvement process is essential to the development of an effective N HMP. To develop a comprehensive approach to reducing the effects of natural disasters, the planning process shall include opportunity for the public, neighboring communities, local and regional agencies, as well as private and non-profit entities to comment on the NHMP during review.¹ Keeping the public informed of the City's efforts to reduce its risk to future natural hazard events is important for successful NHMP implementation and maintenance. The City is committed to involving the public in the NHMP review and update process (Volume I, Section 4). The City posted the plan update for public comment before FEMA approval, and after approval will maintain the plan on the City's website: https://www.milwaukieoregon.gov/

NHMP Maintenance

The Clackamas County NHMP and City addendum will be updated every five years in accordance with the update schedule outlined in the Disaster Mitigation Act of 2000. During the County NHMP update process, the City will also review and update its addendum (Volume I, Section 4). The convener will be responsible for convening the HMAC to address the questions outlined below.

- Are there new partners that should be brought to the table?
- Are there new local, regional, state or federal policies influencing natural hazards that should be addressed?
- Has the community successfully implemented any mitigation activities since the NHMP was last updated?
- Have new issues or problems related to hazards been identified in the community?

¹ Code of Federal Regulations, Chapter 44. Section 201.6, subsection (b). 2015

- Are the actions still appropriate given current resources?
- Have there been any changes in development patterns that could influence the effects of hazards?
- Have there been any significant changes in the community's demographics that could influence the effects of hazards?
- Are there new studies or data available that would enhance the risk assessment?
- Has the community been affected by any disasters? Did the NHMP accurately address the impacts of this event?

These questions will help the HMAC determine what components of the mitigation plan need updating. The HMAC will be responsible for updating any deficiencies found in the NHMP.

Mitigation Strategy

This section of the NHMP addendum addresses 44 CFR 201.6(c)(3(iv), *Mitigation Strategy*.

The City's mitigation strategy (action items) were first developed during the 2003 NHMP planning process and revised during subsequent NHMP updates. During these processes, the HMAC assessed the City's risk, identified potential issues, and developed a mitigation strategy (action items). During the 2023 update process the City updated its action items.

Priority Action Items

Table MA-1 presents a list of action items. The HMAC decided to modify the prioritization of action items in this update to reflect current conditions (risk assessment), needs, and capacity. The City will focus their attention, and resource availability, upon these achievable, high-leverage, activities over the next five years. Although this methodology provides a guide for the HMAC, the HMAC has the option to implement any of the action items at any time. This option to consider all action items for implementation allows the committee to consider mitigation strategies as new opportunities arise, such as capitalizing on funding sources that could pertain to an action item that is not currently listed as the highest priority. Refer to Attachment A for detailed information for each action.

In creating Table MA-1, the city was required to use county and state guidelines for timeline and estimated cost categories. The timeline categories were Short Term (0-2 years), Medium Term (2-5 years), Long Term (5+ years), and Ongoing. Cost categories were Low (less than \$50,000), Medium (\$50,000-100,000), and High (\$100,000+).

Note: Full text of the plan goals referenced in this table is located in Attachment A.

Risk Assessment

This section of the NHMP addendum addresses 44 CFR 201.6(b)(2) - Risk Assessment. In addition, this chapter can serve as the factual basis for addressing Oregon Statewide Planning Goal 7 – Areas Subject to Natural Hazards. Assessing natural hazard risk has three phases:

- Phase 1: Identify hazards that can impact the jurisdiction. This includes an • evaluation of potential hazard impacts – type, location, extent, etc.
- Phase 2: Identify important community assets and system vulnerabilities. Example • vulnerabilities include people, businesses, homes, roads, historic places and drinking water sources.
- Phase 3: Evaluate the extent to which the identified hazards overlap with or have an • impact on, the important assets identified by the community.

The local level rationale for the identified mitigation strategies (action items) is presented herein and within Volume I, Section 3 and Volume III, Appendix C. The risk assessment process is graphically depicted in Figure MA-1. Ultimately, the goal of hazard mitigation is to reduce the area of risk, where hazards overlap vulnerable systems.

Understanding Risk DISASTER RESILIENCE **Vulnerable System** Natural Hazard **Exposure**, Sensitivity Potential Catastrophic and Resilience of: and Chronic Physical Events Risk Past Recurrence Intervals Population of Future Probability Economic Generation Speed of Onset Built Environment Academic and Research Functions Magnitude Disaster Duration Cultural Assets Spatial Extent Infrastructure Ability, Resources and Willingness to: Mitigate • Respond • Prepare • Recover Source: USGS- Oregon Partnership for Disaster Resilience Research Collaboration, 2006

Figure MA-I Understanding Risk

Hazard Analysis

The Milwaukie HMAC developed their hazard vulnerability assessment (HVA), using their previous HVA and the County's HVA as a reference. Changes from their previous HVA and the County's HVA were made where appropriate to reflect distinctions in vulnerability and risk from natural hazards unique to Milwaukie, which are discussed throughout this addendum. For detailed information on the methodology see Volume I, Section 2.

Table MA-2 shows the HVA matrix for Milwaukie listing each hazard in order of rank from high to low. For local governments, conducting the hazard analysis is a useful step in planning for hazard mitigation, response and recovery. The method provides the jurisdiction with sense of hazard priorities but does not predict the occurrence of a hazard.

Three chronic hazards (extreme heat, wildfire, and flood) rank as the top hazard threats to the City (Top Tier). Earthquakes, winter storm, drought, and windstorm constitute the next highest ranked hazards (Middle Tier), while landslide and volcanic hazards are the lowest ranked (Bottom Tier).

Hazard	History	Vulnerability	Maximum Threat	Probability	Total Threat Score	Hazard Rank	Hazard Tiers
Extreme Heat	16	50	90	70	226	1	
Wildfire (WUI)	16	45	90	70	221	2	Тор
Flood - Riverine	10	30	80	70	190	3	
Earthquake - Cascadia (3- 5min)	2	50	100	35	187	4	
Earthquake - Crustal (1 min)	2	40	100	42	184	5	Middle
Winter Storm	16	20	90	56	182	6	
Drought	16	20	70	70	176	7	
Windstorm	8	25	70	56	159	8	
Landslide/Debris Flow	12	15	60	56	143	9	Bottom
Volcano	2	15	50	7	74	10	

Table MA-2 Hazard Analysis Matrix – Milwaukie

Source: Milwaukie HMAC, 2023.

Table MA-3 (next page) categorizes the probability and vulnerability scores from the hazard analysis for the City and compares the results to the assessment completed by the Clackamas County HMAC. Variations between the City and County are noted in **bold** text within the city ratings. Differences in city and county ratings can be attributed to a combination of differing circumstances between the city and county and different understandings of the maximum threat. For example, while the county as a whole has a medium vulnerability to volcanoes, because Milwaukie is relatively far from any volcanoes, its vulnerability is low. Similarly, Clackamas County rates its vulnerability to and probability of extreme heat events as low, but because Milwaukie is significantly more urbanized than the county as a whole, it is more vulnerable to the effects of extreme heat and more likely to experience heat island effects. As a final example, while the county's plan does not account for the effects of wildfire smoke, focusing instead on the direct threat of burning, the city's plan does account for smoke. This leaves Milwaukie with a higher vulnerability to wildfire than the county as a whole.

Future Climate Variability

Human-caused climate change is impacting the natural systems and environmental health of regional and local communities. The City of Milwaukie recognizes the effects that climate

change will have on the city and its residents, including changes to the frequency, severity, and impacts of natural hazards from historical norms. According to the <u>Intergovernmental</u> <u>Panel on Climate Change Fourth National Climate Assessment</u>, the Pacific Northwest region will see impacts to drought risk, water quality, wildfires and air quality, human health and more due to climate change. Even with these challenges, the Pacific Northwest and the City of Milwaukie will shelter a growing population seeking livability and refuge from more extreme climates in the nation.

Threat Event / Herend	Milv	waukie	Clackamas County			
Inreat Event / Hazard	Probability	Vulnerability	Probability	Vulnerability		
Drought	High	Medium	High	Low		
Earthquake - Cascadia (3-5min)	Medium	High	Medium	High		
Earthquake - Crustal (1 min)	Medium	High	Low	High		
Extreme Heat Event	High	High	Medium	Medium		
Flood - Riverine	High	Medium	High	Medium		
Landslide/Debris Flow	High	Low	High	Low		
Volcano	Low	Low	Low	Medium		
Wildfire (WUI)	High	High	High	Medium		
Windstorm	High	Medium	Medium	Low		
Winter Storm	High	Medium	Medium	Medium		

Table MA-3 Probability and Vulnerability Comparison

Source: Milwaukie and Clackamas County HMAC, 2023.

Climate models for Oregon suggest, future regional climate changes include increases in temperature around 0.2-1°F per decade in the 21st Century, along with warmer and drier summers, and some evidence that extreme precipitation will increase in the future.² Increased droughts may occur in the Willamette Valley under various climate change scenarios because of various factors, including reduced snowpack, rising temperatures, and likely reductions in summer precipitation. Climate models suggest that as the region warms, winter snow precipitation will likely shift to higher elevations and snowpack will be diminished as more precipitation falls as rain altering surface flows.

Acknowledging the city's responsibility to be a leader in the climate crisis, Milwaukie adopted a <u>Climate Action Plan</u> detailing 53 city-led actions to mitigate and adapt to climate change. Along with reducing the city's greenhouse gas emissions and contribution to climate

² Oregon Climate Change Research Institute (OCCRI), <u>Fourth Oregon Climate Assessment Report</u> (2019) and <u>Fourth National Climate Assessment, Chapter 23: Northwest</u> (2019). <u>http://www.occri.net/publications-and-reports/publications/</u>

change, the Climate Action Plan calls for increasing the community's resiliency and preparedness for natural hazards through policy, advocacy, outreach and education.

Milwaukie is committed to planning and preparing for the immediate and future threats that climate change will have on the community. By addressing the climate crisis through the actionable goals of the Climate Action Plan, Milwaukie hopes to reduce the risk and impact of climate change related natural hazards on residents of Milwaukie and the region while encouraging others to take climate action.

Community Characteristics

Table MA-4 (next page) and the following section provides information on City specific demographics and assets. Many of these community characteristics can affect how natural hazards impact communities and how communities choose to plan for natural hazard mitigation. Considering the City specific assets during the planning process can assist in identifying appropriate measures for natural hazard mitigation. Between 2016 and 2020 the City grew by 780 people. Median household income increased from \$55,850 to \$70,037 in the same period. Between 2018 and 2040 the population is forecast to grow to 23,149. Although this is the most current forecast available at the time of publication, given the large number of new multi-unit residential buildings currently being constructed or in advanced planning stages in Milwaukie which were not accounted for in this analysis, the actual number may be somewhat higher. New development has complied with the standards of the <u>Oregon Building Code</u> and the City's development code.

Transportation/Infrastructure

Milwaukie is accessible by two state highways, 99E (or McLoughlin Blvd.), running north to south in the western part of the city, and Highway 224, running west to east through the central part of the city. Milwaukie is also bisected by the Union Pacific Railroad main line, which travels northwest to southeast carrying both passengers and freight.

The responsibility and authority, as well as the financial capability, to maintain an adequate level or service for the highways rests with Metro and Oregon Department of Transportation (ODOT) authorities. Congestion can result in the diversion of traffic onto City streets.

The City's public transit is provided by the TriMet transit system. Nine bus routes go through the downtown Milwaukie transit center daily. The <u>MAX Orange Line</u> provides service to Milwaukie. The availability and quality of pedestrian and bicycling facilities (sidewalks, bike lanes, and pathways) is inconsistent but has improved substantially since the 2019 NHMP update due to an increased investment in the Safe Routes to School Program. <u>Base Maps</u> are found on the city's website.

Economy

Milwaukie is a major industrial center in the Portland metropolitan area containing one of the largest concentrations of warehousing and distribution facilities in the region. The Milwaukie Industrial Park, Omark Industrial Park, and the Johnson Creek industrial area comprise over 300 acres of industrial land within the city. These areas are nearing capacity and very little land within the city is currently available for new industrial development.

Milwaukie's commercial lands are largely built up. New commercial development along Highway 224, McLoughlin Boulevard, and 82nd Avenue has lured many people away from downtown Milwaukie for purchasing comparison goods such as clothes, furniture and appliances. Downtown Milwaukie, however, has continued to attract commercial investment in the form of commercial service uses including banks, insurance, professional offices, and several residential mixed-use developments. The city has identified areas for commercial, office, or mixed use development.

The City, school district, and smaller employers (retail, offices and other professional services) provide for most of Milwaukie's employment.

Vacant	345

Milwaukie has grown substantially since its incorporation in 1903 and has an area today of about 5 square miles. Between 1940 and 1980 the population grew from about 2,000 to just under 18,000 residents. Since then the growth in population has slowed, with the city currently containing more than 21,000 residents.

The city is located within the southern bounds of the Portland metropolitan area about six miles from downtown Portland. The city is within the Willamette River basin and has two major creeks flowing through it, Johnson Creek in the northern part of the city and Kellogg Creek in the south.

Milwaukie's climate is consistent with the marine west coast climate zone, with warm summers and cool, wet winters. Milwaukie receives most of its rainfall between October and May, and averages 43 inches of rain, and less than one (1) inch of snow, per year.

Elevations in the city range from 205 feet near 59th Avenue and Monroe Street to a low of 43 feet on the shores of the Willamette River. Milwaukie is characterized by flat or gently hilly topography.

Community Assets -

This section outlines the resources, facilities, and infrastructure that, if damaged, could significantly impact the public safety, economic conditions, and environmental integrity of Milwaukie. The community assets identified below were identified by the City of Milwaukie. The tables identify which hazards each asset may be exposed to, based upon both a GIS analysis as well as HMAC member knowledge. Additional information is needed to fully understand the extent of risk to each asset. It is important to note that the facilities identified as "critical" and "essential" are characterized differently than the structural code that identifies buildings as "essential" and "non-essential." The structural code uses different language and criteria and therefore have completely different meanings than the buildings identified in this addendum.

Critical Facilities

These facilities are critical to government response, and recovery activities (i.e., life, safety, property, and environmental protection). These facilities include: 911 Centers, Emergency Operations Centers, Police, and Fire Stations, Public Works facilities, sewer, and water facilities, hospitals, bridges, roads, shelters, and more.

City Facilities:

- Public Safety Building: Milwaukie Police Department/<u>CFD #2</u> (3200 SE Harrison St)
- Public Works Campus (6101 SE Johnson Creek Blvd)

Facilities not in the City:

- <u>Town Center Station</u> (11300 SE Fuller Rd)
- Oak Grove Station (2930 SE Oak Grove Blvd)
- <u>Lake Road Station</u> (6600 SE Lake Rd)
- Clackamas County Sheriff's Office (9101 SE Sunnybrook Blvd)
- Oregon State Police (8805 SE Deer Creek Ln)

Hospitals:

- Providence Milwaukie Hospital (10150 SE 32nd Ave)
- Kaiser Permanente Sunnyside Hospital (10180 SE Sunnyside Rd; not in city)
- Providence Willamette Falls Medical Center (1500 Division St; not in city)

Essential Facilities

Facilities that are essential to the continued delivery of key government services, and/or that may significantly impact the public's ability to recover from the emergency. These facilities may include: City buildings such as the Public Safety Building, the City Hall, and other public facilities such as schools.

City Buildings:

- City Hall
- Ledding Library
- Milwaukie Community Center
- Johnson Creek Blvd Campus
- Public Safety Building

County Buildings:

• Kellogg Treatment Plant

Schools:

- Ardenwald Elementary
- Clackamas Community College
 (Harmony Road Campus)
- Linwood Elementary
- Milwaukie Elementary/El Puente
- Milwaukie High School

- Portland Waldorf School (private)
- Rowe Middle School
- Seth Lewelling Elementary
- St. John the Baptist School (private)
- School Transportation Center
- Wichita Center

Potential Red Cross Shelter Sites:

- Milwaukie Center (5440 SE Kellogg Creek Dr)
- Milwaukie Presbyterian Church (2416 SE Lake Rd)
- Clackamas Park Friends Church (8120 SE Thiessen Rd, Oak Grove)
- King of Kings Lutheran Church (5501 SE Thiessen Rd, Oak Grove)
- New Hope Church (5197 SE King Rd, Milwaukie, OR 97222)
- GracePointe Church (10750 SE 42nd Ave)
- Schools throughout Milwaukie

Essential Infrastructure

Infrastructure that provides necessary services that supplement response efforts:

Bridges:

County:

- 55th Ave across Johnson Creek
- 60th Ave across Johnson Creek
- Linwood Ave across Johnson Creek
- Milport Rd across Johnson Creek

Portland:

- Johnson Creek Blvd. across Johnson Creek
- Ochoco St across Johnson Creek

TriMet (rail):

- Rail across Highway 99E
- Rail across Kellogg Creek
- Rail crossing north of Mailwell Dr

- Stanley Ave across Johnson Creek
- Oatfield Rd across Kellogg Creek
- Rusk Rd across Mount Scott Creek

State of Oregon:

- 17th Ave across Johnson Creek
- McLoughlin Blvd. across Johnson Creek N. of city
- McLoughlin Blvd. across Kellogg Creek •
- McLoughlin off-ramp to Hwy 224 across Johnson Creek •
- Hwy 224 across Johnson Creek, McLoughlin Blvd. & Main •
- Hwy 224 across railroad tracks and 26th Ave •
- Hwy 224 across Mount Scott Creek •
- Hwy 224 across MAX Light Rail Orange Line tracks

Transportation Corridors:

- 17th Ave
- 32nd Ave
- 55th Ave
- Harrison St/42nd Ave/King Rd. •
- Highway 224
- Johnson Creek Blvd •
- King Rd

Water Treatment Facilities:

- 8 City Wells
- Aeration Packed Towers 5 total at two locations
- Concrete Storage Tank 40th Ave & Harvey St
- Elevated Water Storage Tank 40th Ave & Harvey St
- Ground Level Metal Tank Stanley Ave & Harlow St •
- Sewerage Pump Stations 5 •

Other Utilities:

- NW Natural pipelines
- PGE Substations (One is at edge of Lake Rd / Harmony Rd; a second is on the East end of Johnson Creek; a third is on the border between Milwaukie and Oak Grove)

Vulnerable Populations:

Vulnerable populations, including seniors, disabled citizens, women, and children, as well those people living in poverty, often experience the impacts of natural hazards and disasters more acutely. The city is aware that this is an incomplete list, and is actively seeking to expand it. Populations that have special needs or require special consideration include:

- Lockdown Facility (9200 SE McBrod Ave)
- Hillside Manor (2889 SE Hillside Ct)
- Johnson Creek Treatment Facility (2808 SE Balfour St) •
- Prestige Post-Acute and Rehab Center (12045 SE Stanley Ave) •
- Royal Marc Retirement Residence (5555 SE King Rd)
- Annie Ross House (transitional family housing; 2316 SE Willard St) •
- Milwaukie Community Center (daytime programs; 5440 SE Kellogg Creek Dr) •

- Lake Rd
- Linwood Ave •
- Max Orange Line
- McLoughlin Blvd/Highway 99E •
- Oatfield Rd
- **River** Rd

- ElderPlace Providence (daytime programs, Providence Milwaukie; 10330 SE 32nd Ave)
- Senior Center near North Clackamas Park (in development, 5801 SE Kellogg Creek Dr)

Hazardous Materials:

Facilities that, if damaged, could cause serious secondary impacts may also be considered "critical." A hazardous material facility is one example of this type of critical facility. Those sites that store, manufacture, or use potentially hazardous materials include:

- Johnson Creek Blvd
- North Milwaukie Industrial Area
- McLoughlin Industrial Area/Rail Yard
- Kellogg Treatment Plant

Economic Assets/Population Centers:

Economic assets include businesses that employ large numbers of people and provide an economic resource to the City. If damaged, the loss of these economic assets could significantly affect economic stability, and prosperity. Population Centers usually are aligned with economic centers and are a concern during evacuation/notification during a hazard event. These assets include: Downtown, McLoughlin Commercial Areas, and North Milwaukie Industrial Area.

Environmental Assets:

Environmental assets are those parks, green spaces, wetlands, and rivers that provide an aesthetic, and functional ecosystem services for the community. These environmental assets include: Ball-Michel Park, Dogwood Park, Elk Rock Island, Homewood Park, North Clackamas Park, Milwaukie Bay Park, Stanley Park, Water Tower Park, Three Creeks Natural Area, Spring Park, and Wichita Park.

Cultural or Historical Assets:

These assets include those facilities that augment or help define community character, and if lost, would represent a significant loss for the community.

Historic Inventory: (see State Historic Preservation Office for more information)

- Over 500 houses
- 5 commercial buildings
- 3 schools
- 1 cemetery
- 1 church
- 1 city hall
- 1 waterworks

Community Attractions:

- 17th Avenue Bike/Pedestrian Path
- Bob's Red Mill

- Carefree Sunday
- Dark Horse Comics Corporate Headquarters

- First Friday (June-October)
- Milwaukie Art and Artisan Market
- Milwaukie Bay Park
- Milwaukie Farmers Market
- Milwaukie Museum
- Sara Hite Memorial Rose Garden

Hazard Characteristics

Drought

- Spring Park and Elk Rock Island
- Springwater Trail
- Trolley Trail
- Umbrella Parade
- Winter Solstice Event

The HMAC determined that the City's probability for drought is **High** and that their vulnerability to drought is **Medium**. These ratings both increased from the previous NHMP addendum due to a combination of a different understanding of the most severe possible effects of drought and an increasingly unstable climate.

Volume I, Section 2 describes the characteristics of drought hazards, history, as well as the location, extent and probability of a potential event. Due to the climate of Clackamas County, past and present weather conditions have shown an increasing potential for drought.

The City of Milwaukie currently obtains its potable water from the Troutdale Aquifer through eight operating wells located throughout the city. Interties to the City of Portland and Clackamas River Water systems are maintained for emergency water supplies. The network of three water reservoirs provides a storage volume of six million gallons. The <u>Water System Master Plan</u> was last updated in 2021 to provide long-term guidance for the development of the City's water system. It is a supporting document for the Comprehensive Plan. The document also includes recommended capital improvement projects and a map documenting the water infrastructure placement within the city.

Vulnerability Assessment

Due to insufficient data and resources, Milwaukie is currently unable to perform a quantitative risk assessment, or exposure analysis, for this hazard.

Mitigation Activities

Milwaukie has a public awareness action item that can be used to address drought education. The existing drought hazard mitigation activities are conducted at the county, regional, state, and federal levels and are described in the Clackamas County NHMP.

Please review Volume I, Section 2 for additional information on this hazard.

Earthquake (Cascadia Subduction Zone)

The HMAC determined that the City's probability for a Cascadia Subduction Zone (CSZ) earthquake is **moderate** and that their vulnerability to a CSZ earthquake is **high**. *The probability and vulnerability ratings did not change since the previous version of this NHMP addendum*.

Volume I, Section 2 describes the characteristics of earthquake hazards, history, as well as the location, extent and probability of a potential event. Generally, an event that affects the County is likely to affect Milwaukie as well. The causes and characteristics of an earthquake event are appropriately described within the Volume I, Section 2 as well as the location and extent of potential hazards. Previous occurrences are well documented within Volume I, Section 2 and the community impacts described by the County would generally be the same for Milwaukie as well.

Within the Northern Willamette Valley/Portland Metro Region, three potential faults and/or zones can generate high-magnitude earthquakes. These include the Cascadia Subduction Zone, Portland Hills Fault Zone, Gales Creek-Newberg-Mt. Angel Structural Zone (discussed in the crustal earthquake section).

Figure MA-2 displays relative shaking hazards from a Cascadia Subduction Zone earthquake event. As shown in the figure, most of the city is expected to experience very strong shaking (orange), while areas near rivers and streams will experience severe (light red) to violent (dark red) shaking in a CSZ event.

Source: Oregon HazVu: Statewide Geohazards Viewer (DOGAMI) Note: To view detail click the link above to access Oregon HazVu

Cascadia Subduction Zone

The Cascadia Subduction Zone is a 680-mile-long zone of active tectonic convergence where oceanic crust of the Juan de Fuca Plate is subducting beneath the North American continent at a rate of 4 cm per year. Scientists have found evidence that 11 large, tsunami-producing earthquakes have occurred off the Pacific Northwest coast in the past 6,000 years. These earthquakes took place roughly between 300 and 5,400 years ago with an average occurrence interval of about 510 years. The most recent of these large earthquakes took place in approximately 1700 A.D.³

The city's proximity to the Cascadia Subduction Zone, potential slope instability and the prevalence of certain soils subject to liquefaction and amplification combine to give the city a high-risk profile. Due to the expected pattern of damage resulting from a CSZ event, the Oregon Resilience Plan divides the State into four distinct zones and places the city predominately within the "Valley Zone" (Valley Zone, from the summit of the Coast Range to the summit of the Cascades). Within the Northwest Oregon region, damage and shaking is expected to be strong and widespread - an event will be disruptive to daily life and commerce and the main priority is expected to be restoring services to business and residents.

Earthquake (Crustal)

The HMAC determined that the City's probability of crustal earthquake is **moderate** and that its vulnerability is **high**. The probability rating increased while the vulnerability rating did not change since the previous version of this NHMP addendum due to an improved understanding of the likelihood of a crustal earthquake.

Volume I, Section 2 describes the causes and characteristics of earthquake hazards, history, as well as the location, extent, and probability of a potential event. Generally, an event that affects the County is likely to affect Milwaukie as well. Figure MA-3 (next page) shows a generalized geologic map of the Milwaukie area that includes the areas for potential regional active faults, earthquake history (1971-2008), and soft soils (liquefaction) hazard. The figure shows the areas of greatest concern within the City limits as red and orange.

There are two potential crustal faults and/or zones near the City that can generate highmagnitude earthquakes. These are the Gales Creek-Mt. Angel Structural Zone and Portland Hills Fault Zone (discussed in greater detail below). Other faults include the Oatfield fault (just to the east of the city on the eastern side of the Willamette River), the Damascus-Tickle Creek fault, also to the east of the city, and the Mt. Hood Fault in eastern Clackamas County. Historical records count over 56 earthquakes in the Portland-metro area. The more severe ones occurred in 1877, 1880, 1953 and 1962. The most recent severe earthquake was the March 25, 1993 Scotts Mills quake. It was a 5.6 magnitude quake with aftershocks continuing at least through April 8.

Portland Hills Fault Zone

The Portland Hills Fault Zone is a series of NW-trending faults that vertically displace the Columbia River Basalt by 1,130 feet and appear to control thickness changes in late

³ The Cascadia Region Earthquake Workgroup, 2005. Cascadia Subduction Zone Earthquakes: A magnitude 9.0 earthquake scenario. <u>http://www.crew.org/PDFs/CREWSubductionZoneSmall.pdf</u>

Pleistocene (approx. 780,000 years ago) sediment. The fault zone extends along the eastern margin of the Portland Hills for 25 miles and runs through the western side of Milwaukie.

Earthquake-induced damages are difficult to predict, and depend on the size, type, and location of the earthquake, as well as site-specific building, and soil characteristics. Presently, it is not possible to accurately forecast the location or size of earthquakes, but it is possible to predict the behavior of soil at any site. In many major earthquakes, damages have primarily been caused by the behavior of the soil.

Figure MA-3 Active Crustal Faults, Epicenters (1971-2008), and Soft Soils

Vulnerability Assessment

Due to insufficient data and resources, Milwaukie is currently unable to perform a quantitative risk assessment for this hazard. However, the City completed an analysis, using the best available data, as a component of the vulnerability assessment in 2009, updated in 2012, and reviewed and updated, as appropriate, in 2018 and 2023. This analysis looked at identified hazard areas in conjunction with available data on property exposed to the hazard. Exposure of community assets to natural hazards was determined by manually comparing community assets with each hazard and identifying where assets and hazards intersected. Additionally, in 2018 the Department of Geology and Mineral Industries

(DOGAMI) completed a regional impact analysis for earthquakes originating from the Cascadia Subduction Zone and Portland Hills faults (<u>0-18-02</u>), findings from that report are provided at the end of the crustal earthquakes hazard section.

Community assets located in the highest hazard zone for earthquakes include the Public Safety Building (Milwaukie Police Department and Clackamas Fire District Station 2), Providence Milwaukie Hospital, and the Milwaukie Business Industrial Area. Milwaukie's infrastructure is particularly vulnerable to earthquake damage, especially Highway 224, Highway 99E, and the crossings of Johnson Creek. Of the city's eight wells, two of them are along the fault line, with others in the moderate to high hazard zones for earthquakes. During a major earthquake, emergency responders may have difficulty performing their duties because their buildings could be impacted by the event. The Public Safety Building is in the moderate to high hazard zones. Areas near the Willamette River and various creeks around Milwaukie are likely composed of softer soils prone to liquefaction. This can be very destructive to underground utilities such as water and sewer lines. Buildings and water lines can sink into the liquefied ground while sewer pipes, manholes and pump stations (assets partially filled with air) may float to the surface. After the earthquake, the liquefied soil will re-solidify, locking tilted buildings and broken pipe connections into place.

Vulnerable populations, including children, could be significantly impacted, as many schools lie in the highest two hazard zones. The data gathered from the statewide DOGAMI inventory should be used to prioritize school buildings in Milwaukie for seismic hazard retrofitting.

Seismic building codes were implemented in Oregon in the 1970s, however, stricter standards did not take effect until 1991 and early 2000s. As noted in the community profile, approximately 86% of residential buildings were built prior to 1990, which increases the City's vulnerability to the earthquake hazard. However, because Milwaukie's buildings are generally wood-framed structures of no more than two stories, the city is more resilient to earthquake damage than it might otherwise be. Information on specific public buildings' (schools and public safety) estimated seismic resistance, determined by DOGAMI in 2007, is shown in Table MA-5 (next page); each "X" represents one building within that ranking category. Of the facilities evaluated by DOGAMI using their Rapid Visual Survey (RVS), three (3) have very high (100% chance) collapse potential, while two (2) have a high (greater than 10% chance) collapse potential. *Note: two schools, Ardenwald Elementary and Milwaukie High School, have been retrofitted*.

In addition to building damages, utility (electric power, water, wastewater, natural gas) and transportation systems (bridges, pipelines) are also likely to experience significant damage. There is a low probability that a major earthquake will result in failure of upstream dams, both on the Willamette and Sandy rivers.

Utility systems will be significantly damaged, including damaged buildings and damage to utility infrastructure such as water treatment plants and equipment at high voltage substations (especially 230 kV or higher which are more vulnerable than lower voltage substations). Buried pipe systems will suffer extensive damage with approximately one break per mile in soft soil areas. There would be a much lower rate of pipe breaks in other areas. Restoration of utility services will require substantial mutual aid from utilities outside of the affected area.

Mitigation Activities
Milwaukie has taken mitigation steps to reduce the city's vulnerably in earthquake events. Additional mitigation activities completed by the City of Milwaukie include:

• Compliance with SB 13, enacted in 2001, requiring local governments to develop seismic preparation procedures, inform their employees about the procedures, and conduct earthquake drills. (continued on Page MA-29)

Note 2: Private schools were not assessed by DOGAMI as part of O-07-02.

- Conformance with seismic-related construction requirements in the Oregon Structural Specialty Code and Oregon One- and Two-Family Dwelling Specialty Code.
- Adoption of a policy to require undergrounding of power lines in new subdivisions.
- Development Code restrictions regarding construction on steep slopes.
 - The following buildings have been constructed to be earthquake safe: Water tower at 40th Ave and Harvey St, Milwaukie High School Fine Arts Center, and Linwood Elementary Main Office and Gym.
 - Ardenwald Elementary retrofitted per 2008 bond passed by voters (former building demolished in 2009).
 - Milwaukie High School Main building rebuilt in 2021.

Earthquake Regional Impact Analysis

In 2018 DOGAMI completed a regional impact analysis for earthquakes originating from the Cascadia Subduction Zone and Portland Hills faults (0-18-02). Their study focused on damage to buildings, and the people that occupy them, and to two key infrastructure sectors: electric power transmission and emergency transportation routes. Each earthquake was studied with wet and dry soil conditions and for events that occur during the daytime (2 PM) and nighttime (2 AM). Impacts to buildings and people were tabulated at the county, jurisdictional (city), and neighborhood unit level. Estimated damaged varied widely across the study area depending on local geology, soil moisture conditions, type of building, and distance from the studied faults. In general, damage from the Cascadia Subduction Zone scenario was greater in the western portion of the study area, however, damage could still be significant in some areas east of the Willamette River. The report found that damage to high-value commercial and industrial buildings was high since many of these facilities are in areas of high to very high liquefaction hazard. Casualties were higher during the daytime scenario (generally double) since more people would be at work and occupying non-wood structures that fare worse in an earthquake. The Portland Hills fault scenario created greater damages than the Cascade Subduction Zone scenario due primarily to its placement relative to population centers and regional assets; however, at distances 15 or more miles from the Portland Hills fault the damages from the Cascadia Subduction Zone scenario generally were higher. In both the Cascadia Subduction Zone and Portland Hills Fault scenarios it is forecasted that emergency transportation routes will be fragmented, affecting the distribution of goods and services, conditions are worse under the Portland Hills Fault scenario. Portions of the electric distribution system are also expected to be impacted under both scenarios, however, the impact is considerably less than it is to the transportation routes. Additional, capacity or redundancy within the electric distribution network may be beneficial in select areas that are likely to have greater impacts.

Table MA-6 (next page) shows the permanent resident population that are vulnerable to injury or death (casualty) and the buildings in the city that are susceptible to liquefaction

and landslides, it does not predict that damage will occur in specific areas due to either liquefaction or landslide. More population and property are exposed to higher degrees of expected damage or casualty under the Portland Hills Fault "wet" scenario than in any other scenario.

	Cascadia Subduction Zone (M9.0)		Portland Hills Fault (M6.8)		
	"Dry" Soil	"Wet" Saturated Soil	"Dry" Soil	"Wet" Saturated Soil	
Number of Buildings	7,891	7,891	7,891	7,891	
Building Value (\$ Million)	2,890	2,890	2,890	2,890	
Building Repair Cost (\$ Million)	295	394	1,341	1,598	
Building Loss Ratio	0	0	0	1	
Debris (Thousands of Tons)	162	193	542	615	
Long-Term Displaced Population	93	83	2,459	5,456	
Total Causualities (Daytime)	294	380	1,427	1,595	
Level 4 (Killed)	14	19	82	89	
Total Casualities (Nighttime)	34	92	326	546	
Level 4 (Killed)	1	3	10	16	

Table MA-6 Expected damages and casualties for the CSZ fault and Portland Hills fault: earthquake, soil moisture, and event time scenarios

Source: DOGAMI, Earthquake regional impact analysis for Clackamas, Multnomah, and Washington Counties, Oregon (2018, O-18-02), Tables 12-8, 12-9, 12-10, and 12-11.

Cascadia Subduction Zone Scenario

The City of Milwaukie is expected to have a 10% building loss ratio with a repair cost of \$295 million under the CSZ "dry" scenario, and a 14% building loss ratio with a repair cost of \$394 million under the CSZ "wet" scenario.⁴ The city is expected to have around 294 daytime or 34 nighttime casualties during the CSZ "dry" scenario and 380 daytime or 92 nighttime casualties during the CSZ "wet" scenario. It is expected that there will be a long-term displaced population of around 93 for the CSZ "dry" scenario and 83 for the CSZ "wet" scenario.⁵

Portland Hills Fault Scenario

The City of Milwaukie is expected to have a 46% building loss ratio with a repair cost of \$1.341 billion under the CSZ "dry" scenario, and a 55% building loss ratio with a repair cost of \$1.598 billion under the CSZ "wet" scenario.⁶ The long-term displaced population and casualties are greatly increased for all the Portland Hills Fault scenarios. The city is expected to have around 1,427 daytime or 326 nighttime casualties during the Portland Hills Fault

⁴ DOGAMI, Earthquake regional impact analysis for Clackamas, Multnomah, and Washington Counties, Oregon (2018, O-18-02), Tables 12-8 and 12-9.

⁵ Ibid, Tables 12-8 and 12-9.

⁶ Ibid, Tables 12-10 and 12-11

"dry" scenario and 1,595 daytime or 546 nighttime casualties during the Portland Hills Fault "wet" scenario. It is expected that there will be a long-term displaced population of around 2,459 for the Portland Hills Fault "dry" scenario and 5,456 for the Portland Hills Fault "wet" scenario.⁷

Recommendations from the report included topics within Planning, Recovery, Resiliency: Buildings, Resiliency: Infrastructure Improvements, Resiliency: Essential and Critical Facilities, Enhanced Emergency Management Tools, Database Improvements, Public Awareness, and Future Reports. The recommendations of this study are largely incorporated within this NHMPs mitigation strategies (Table MA-1 and Volume I, Section 3). For more detailed information on the report, the damage estimates, and the recommendations see: *Earthquake regional impact analysis for Clackamas, Multnomah, and Washington Counties, Oregon* (2018, <u>0-18-02</u>).

Please review Volume I, Section 2 for additional information on this hazard.

Flood

The HMAC determined that the City's probability for flood is **high** and that their vulnerability to flood is **medium**. The probability rating did not change, while the vulnerability rating decreased since the previous version of this NHMP addendum due to progress made in infrastructure retrofitting and other mitigation actions.

Volume I, Section 2 describes the characteristics of flood hazards, history, as well as the location, extent, and probability of a potential event. Figure MA-4 illustrates the flood hazard area for Milwaukie.

⁷ Ibid, Tables 12-10 and 12-11.

Figure MA-4 Special Flood Hazard Area

Source: Oregon HazVu: Statewide Geohazards Viewer (DOGAMI) Note: To view detail click the link above to access Oregon HazVu For additional maps including the 1996 flood inundation area see the City's <u>Flood Hazard Map Viewer</u>

Portions of Milwaukie have areas of floodplain (special flood hazard areas, SFHA). These include Johnson Creek, Kellogg Creek, Mount Scott Creek, Minthorn Creek, Spring Creek, and the Willamette River. The Federal Emergency Management Agency (FEMA) regulatory floodplains for each of these rivers are depicted as relatively narrow areas on each side of the channels. On the Willamette River, the floodway is generally confined within high stream banks. The FEMA 100-year map shows that approximately 1.3 miles of the transportation network could be affected in a flood.

Floods can have a devastating impact on almost every aspect of the community, including private property damage, public infrastructure damage, and economic loss from business interruption. It is important for the City to be aware of flooding impacts and assess its level of risk.

The economic losses due to business closures often total more than the initial property losses that result from flood events. Business owners, and their employees are significantly impacted by flood events. Direct damages from flooding are the most common impacts, but indirect damages, such as diminished clientele, can be just as debilitating to a business.

For mitigation planning purposes, it is important to recognize that flood risk for a community is not limited only to areas of mapped floodplains. As an urban city, Milwaukie is predominantly covered in impermeable surfaces like roads and buildings, impacting

historical watershed hydrology and altering the amount and speed of stormwater runoff as sheet flow. With more frequent and intense storms caused by climate change, flash flooding events can produce volumes of surface water which can quickly exceed the capacity of the city's stormwater infrastructure. These events lead to an overflowing of piped stormwater facilities during high flow, as well as scouring, erosion, overflow flooding, and vegetation decline and/or death at facilities like detention ponds and rain gardens, along with the numerous small creeks, streams, ponds and other waterbodies crossing Milwaukie's landscape. Resulting damage from these events can be extremely costly in both labor and materials and can compromise both gray and green infrastructure. This in turn reduces the functionality of these systems for protecting water quality, jeopardizing the city's ability to meet state and federal water quality mitigation requirements.

More information on stormwater infrastructure and floodplain and runoff capacity planning can be found in the Milwaukie Stormwater System Plan.

The speed of onset, lack of warning, and depth of flooding make dam failures a potentially deadly, albeit unlikely, occurrence. There are four major dams upstream of Milwaukie on the Clackamas River: North Fork, Faraday, River Mill and Timothy. These are operated by Portland General Electric and are subject to the dam safety and warning requirements of the Federal Energy Regulatory Commission. According to the Clackamas County Emergency Operations Plan, areas of Milwaukie bordering on the Willamette in the vicinity of its confluence with the Clackamas would be inundated by a wall of water 60 - 80 feet high in approximately an hour and a half should the North Fork dam fail under a "probable maximum flood" (a worst-case scenario where all four dams fail). In December 2015 Milwaukie had to evacuate approximately 50 people from their homes as Mount Scott and Johnson Creek overflowed.

The largest flooding event to affect Milwaukie was the February 1996 flood. The high-water level meant tributaries could not drain into the Tualatin and Willamette River, which led to localized flooding on several backed-up creeks.

The extent of flooding hazards in Milwaukie primarily depends on climate and precipitation levels. Additionally, withdrawals for irrigation and drinking water, as well as stream and wetland modifications or vegetation removal can influence water flow.

Vulnerability Assessment

Due to insufficient data and resources, Milwaukie is currently unable to perform a quantitative risk assessment for this hazard. However, the City completed an analysis, using the best available data, as a component of the vulnerability assessment in 2009, updated in 2012, and reviewed and updated, as appropriate, in 2018 and 2023. This analysis looked at identified hazard areas in conjunction with available data on property exposed to the hazard. Exposure of community assets to natural hazards was determined by manually comparing community assets with each hazard and identifying where assets and hazards intersected.

The areas around Johnson Creek (impacts industrial area), Kellogg Creek, Mount Scott Creek (impact North Clackamas Park, Senior Center, and multiple residences north of Highway 224 and south of Lake Road), and Willamette River are particularly vulnerable to flooding. Additionally, proposed lots on 19th Avenue may be vulnerable to Willamette River flooding. Johnson Creek runs through the Downtown Mixed Use and North Milwaukie Employment zones. Kellogg Creek mostly affects residential areas in the chance of flooding. The downtown area is located near the Willamette River due to the historic use of the river for economic reasons.

Additionally, a great deal of infrastructure (bridges, water lines, sewage pump stations, etc.) is in the floodplain. Infrastructure exposed to flooding includes, but is not limited to, Highway 224, SE Lake Rd, SE McLoughlin Blvd, and the north industrial park. Disruption to this infrastructure could result in transportation issues, power outages, sewage back-up, and affect overall community and environmental health.

Risk Analysis - Repetitive Loss Properties:

Milwaukie works to mitigate problems regarding flood issues when they arise. Some areas in the city are more susceptible to flooding issues and have incurred repetitive losses. The Community Repetitive Loss record for Milwaukie identifies eleven (11) Repetitive Loss (RL) properties⁸, and one (1) Severe Repetitive Loss (SRL) property⁹. RL and SRL properties are troublesome because they continue to expose lives and valuable property to the flooding hazard. Local governments as well as federal agencies such as FEMA attempt to address losses through floodplain insurance and attempts to remove the risk from repetitive loss of properties through projects such as acquiring land and improvements, relocating homes or elevating structures. Continued repetitive loss claims from flood events lead to an increased amount of damage caused by floods, higher insurance rates, and contribute to the rising cost of taxpayer funded disaster relief for flood victims.

Table MA-7 provides information on the identified RL and SRL properties. There have been 31 paid RL claims totaling \$1,550,590. Seven (7) of the RL and SRL properties are not insured as of May 2023. For additional detail and a map of their general location see Volume I, Section 2 and Figure 2-13.

RL or SRL Property	Location	Currently Insured	Flood Zone	Occupancy	Historic Building	Total Paid Claims	Total Paid Amount
SRL	City of Milwaukie	NO	В	Single Family	No	6	\$100,814
RL	City of Milwaukie	NO	С	2-4 Family	No	3	\$28 <i>,</i> 463

RL	City of Milwaukie	NO	С	2-4 Family	No	2	\$17,351
RL	City of Milwaukie	NO	A19	Other Non- Residential	No	2	\$396,804

Table MA-7 Repetitive Loss and Severe Repetitive Loss Properties Detail

⁸ A Repetitive Loss (RL) property is any insurable building for which two or more claims of more than \$1,000 were paid by the National Flood Insurance Program (NFIP) within any rolling ten-year period, since 1978. A RL property may or may not be currently insured by the NFIP.

⁹ A Severe Repetitive Loss (SRL) property is a single family property (consisting of 1 to 4 residences) that is covered under flood insurance by the NFIP, and has incurred flood-related damage for which 4 or more separate claims payments have been paid under flood insurance coverage, with the amount of each claim payment exceeding \$5,000, and with cumulative amount of such claims payments exceeding \$20,000; or for which at least 2 separate claims payments have been made with the cumulative amount of such claims exceeding the reported value of the property.

RL	City of Milwaukie	YES	Х	Single Family	No	2	\$65,060
RL	City of Milwaukie	NO	AE	Single Family	No	2	\$141,105

Mitigation Activities

Milwaukie employs several mitigation strategies to reduce the city's risk to flood events, including mapping flood-prone areas by address. The city's priority is to mitigate residences located within the floodway (see FL #1). The city development code includes policies and regulations for flood prone areas including, Natural Resources Overlay Zone (Chapter 19.402, Natural Resources Administrative Map), Flood Hazard Regulations (Title 18 – Flood Hazard Areas (includes the SFHA and the 1996 flood inundation area; Flood Hazard Map Viewer), and Willamette Greenway Zone (Chapter 19.401). Milwaukie regularly inspects and maintains the stormwater facilities. Catch basins are routinely cleaned and inspected and a regular street sweeping program reduces the amount of debris and contaminants entering the stormwater system. The City maintains a Stormwater Master Plan and has been planning various projects to restore Kellogg Creek. These projects would include building a bridge over the creek and downtown revitalization. In late 2022, the City secured grant funding through the National Oceanic and Atmospheric Administration to pay for the planning, design, and permitting of the removal of Kellogg Dam. Although Kellogg Creek has historically been less prone to flooding than Johnson Creek, the removal of the dam is expected to further mitigate the existing flood hazard by draining Kellogg Lake. The draining lake is expected to create some hazards of its own, including the uncovering of a currently submerged sewer line that crosses the lake in the vicinity of SE 29th Ave. This pipe will need additional support. The foundations of the railroad trestle bridge crossing the lake will also be exposed. City engineers are working to identify mitigation strategies for the risks created by this exposure.

To improve stormwater management the city of Milwaukie lined the interiors of all pipes along the 18th Avenue infiltration line. This mitigation project minimizes the amount of groundwater that infiltrates into sewer lines and helps reduce the overall amount of water going into the wastewater treatment plant, thus reducing the chance of overflow of the sewer system. Additionally, a severe repetitive loss property on Rusk Road was purchased and demolished using FEMA Flood Mitigation Assistance funding in 2018 (grant covered approximately \$315,000 for the purchase of the property, additional funds were allocated for staff hours, title report, due diligence reports, and demolition contract). In 2006 Clackamas County Water Environment Services partnered with eight community groups to restore the Three Creeks area – including Mount Scott Creek, a tributary to Kellogg Creek and the Willamette River. The group reshaped the stream channel to make it more natural; removed invasive species; planted thousands of native plants to stabilize banks; and put in wood and boulders to stabilize the channel and provide habitat for fish. The groups also removed trash and transient camps that polluted the streams during floods.

Projects completed by the Johnson Creek Watershed Council:

- Tree Plantings along Johnson Creek in various places.
- Storm water detention near Milport.

In 2018 the City completed its <u>Urban Forest Plan</u> which includes information on tree planting strategies. Increasing the scope of the urban canopy can help to divert and retain water that would otherwise contribute directly to flooding.

Please review Volume I, Section 2 for additional information on this hazard.

Landslide

The HMAC determined that the City's probability for landslide is **high** and that its vulnerability to landslide is **low**. The probability rating increased, and the vulnerability rating did not change since the previous version of this NHMP addendum due to the inclusion of smaller scale landslides and landslides occurring upstream of Milwaukie in the current update.

Volume I, Section 2 describes the characteristics of landslide hazards, history, as well as the location, extent, and probability of a potential event within the region. Although catastrophic landslides have not occurred in Milwaukie, steep slopes do exist along the banks of the Willamette River and Kellogg Creek. Additionally, upstream landslides affecting waters that flow into or through Milwaukie pose secondary hazards to the city due to debris and flood risks.

Landslide susceptibility exposure for Milwaukie is shown in

Across the Willamette River in Riverdale area, there is a large area of land that is at a very high risk of landslide. This could result in potential flooding along Milwaukie's banks in the event of a landslide that disrupts the flow of the Willamette River. Within the City, parts of Highway 224, SE Lake Rd, and SE Johnson Creek Blvd are located within the areas of high landslide susceptibility. These important arterials that help connect Milwaukie. The Milwaukie Heights area, which includes mostly low density residential and open space areas, is also vulnerable. This exposure means that large scale and simultaneous landslides triggered by an earthquake could substantially disrupt City operations buildings, fire stations and key pieces of infrastructure (bridges, sewage pump stations, water reservoirs) that would hinder the ability of the City to respond to emergency situations created by such an event.

As a result, it will be important for the City to pursue opportunities for retrofitting and mitigating important structures and infrastructure, such that said facilities can withstand and survive landslides, particularly simultaneous landslides generated by an earthquake. Business continuity planning shall also be an important factor, given the number of economic centers and employment facilities that are threatened by the landslide hazard.

Potential landslide-related impacts are described within Volume I, Section 2, and include infrastructure damages, economic impacts (due to isolation, and/or arterial road closures), property damages, and obstruction to evacuation routes. Rain-induced landslides, and debris flows can potentially occur during any winter, and thoroughfares beyond city limits are susceptible to obstruction as well.

Figure MA-5 (Page MA-36).

Most of Milwaukie demonstrates a low to moderate landslide susceptibility exposure. Approximately 4% of Milwaukie has very high or high, and approximately 31% moderate, landslide susceptibility exposure.¹⁰ However, most of the areas that are identified to exhibit dangerous potential rapidly moving landslides are vacant and often preserved in wooded and dedicated open space.

Note that even if a jurisdiction has a high percentage of area in a high or very high landslide exposure susceptibility zone, this does not mean there is a high risk, because risk is the intersection of the susceptibility, vulnerability, and presence of assets.

Vulnerability Assessment

Due to insufficient data and resources, Milwaukie is currently unable to perform a quantitative risk assessment for this hazard. However, DOGAMI completed a statewide landslide susceptibility assessment in 2016 (<u>O-16-02</u>), general findings from that report are provided above and within

Across the Willamette River in Riverdale area, there is a large area of land that is at a very high risk of landslide. This could result in potential flooding along Milwaukie's banks in the event of a landslide that disrupts the flow of the Willamette River. Within the City, parts of Highway 224, SE Lake Rd, and SE Johnson Creek Blvd are located within the areas of high landslide susceptibility. These important arterials that help connect Milwaukie. The Milwaukie Heights area, which includes mostly low density residential and open space areas, is also vulnerable. This exposure means that large scale and simultaneous landslides triggered by an earthquake could substantially disrupt City operations buildings, fire stations and key pieces of infrastructure (bridges, sewage pump stations, water reservoirs) that would hinder the ability of the City to respond to emergency situations created by such an event.

As a result, it will be important for the City to pursue opportunities for retrofitting and mitigating important structures and infrastructure, such that said facilities can withstand and survive landslides, particularly simultaneous landslides generated by an earthquake. Business continuity planning shall also be an important factor, given the number of economic centers and employment facilities that are threatened by the landslide hazard.

Potential landslide-related impacts are described within Volume I, Section 2, and include infrastructure damages, economic impacts (due to isolation, and/or arterial road closures), property damages, and obstruction to evacuation routes. Rain-induced landslides, and

¹⁰ DOGAMI. <u>Open-File Report, O-16-02</u>, Landslide Susceptibility Overview Map of Oregon (2016)

debris flows can potentially occur during any winter, and thoroughfares beyond city limits are susceptible to obstruction as well.

Figure MA-5 (next page). Additionally, the City completed an analysis, using the best available data, as a component of the vulnerability assessment in 2009, updated in 2012, and reviewed and updated, as appropriate, in 2018 and 2023. This analysis looked at identified hazard areas in conjunction with available data on property exposed to the hazard. Exposure of community assets to natural hazards was determined by manually comparing community assets with each hazard and identifying where assets and hazards intersected.

Across the Willamette River in Riverdale area, there is a large area of land that is at a very high risk of landslide. This could result in potential flooding along Milwaukie's banks in the event of a landslide that disrupts the flow of the Willamette River. Potential landslide-related impacts are described within Volume I, Section 2, and include infrastructure damages, economic impacts (due to isolation, and/or arterial road closures), property damages, and obstruction to evacuation routes. Rain-induced landslides, and debris flows can potentially occur during any winter, and thoroughfares beyond city limits are susceptible to obstruction as well.

Figure MA-5 Landslide Susceptibility Exposure

Very High

Landsliding possible. Areas classified as Landslide Density = Low to Moderate (less than 17%) and areas classified as Slopes Prone to Landsliding = Moderate OR areas classified as Landslide Density = Moderate (7%-17%) and areas classified as Slopes Prone to Landsliding = Low.

Landsliding likely. Areas classified as Landslide Density = High (greater than 17%) and areas classified as Slopes Prone to Landsliding = Low and Moderate OR areas classified as Landslide Density = Low and Moderate (less than 17%) and areas classified as Slopes Prone to Landsliding = High.

Existing landslides Landslide Density and Slopes Prone to Landsliding data were not considered in this category. Note: the quality of landslide inventory (existing landslides) mapping varies across the state.

Source: Oregon HazVu: Statewide Geohazards Viewer (DOGAMI) Note: To view detail click the link above to access Oregon HazVu

The most common type of landslides are slides caused by erosion. Slides move in contact with the underlying surface, are generally slow moving, and can be deep. Rainfall-initiated landslides tend to be smaller; while earthquake induced landslides may be quite large. All soil types can be affected by natural landslide triggering conditions.

Mitigation Activities

Milwaukie works to mitigate future landslide hazards. The city development code includes several policies and regulations to protect slopes including Erosion Control (Chapter 16.28), Willamette Greenway Zone Overlay (Chapter 19.401), and limitations of permitted development within slopes greater than 25%.

Please review Volume I, Section 2 for additional information on this hazard.

Severe Weather

Severe weather can account for a variety of intense, and potentially damaging hazard events. These events include extreme heat, windstorms, and winter storms. The following section describes the unique probability, and vulnerability of each identified weather hazard.

Extreme Heat

The HMAC determined that the City's probability for extreme heat events is **high** and that their vulnerability is **high**. *The probability rating increased and vulnerability rating did not change since the previous version of this NHMP addendum.*

Volume I, Section 2 describes the characteristics of extreme heat, history, as well as the location, extent, and probability of a potential event within the region. Generally, an event that affects the County is likely to affect the City as well, but Milwaukie is more vulnerable to the so "heat island effect" than more rural portions of the county. Heat islands occur where extremely localized ambient air temperatures in urban areas are an average of 1-7 degrees higher than those found in surrounding areas. They occur as structures and pavement absorb, radiate, and reflect heat energy rather than engaging in evapotranspiration as trees and other plants do. Milwaukie's efforts to preserve and expand its urban forest canopy will continue to play a role in mitigating the formation of heat islands, but the threat remains a significant one.

A severe heat episode or "heat wave" occurs about every two to three years, and typically lasting two to three days but can last as many as five days. A severe heat episode can be defined as consecutive days of upper 90s to around 100. Severe heat hazard in the Portland metro region can be described as the average number of days with temperatures greater than or equal to 90-degrees, or 100-degrees, Fahrenheit. On average the region experiences 14.6 days with temperatures above 90-degrees Fahrenheit, and 1.2 days above 100-degrees Fahrenheit, based on new 30-year climate averages (1991-2020) from the National Weather Service – Portland Weather Forecast Office. The 30-year average is used to account for short-term variation in temperatures. The frequency of high temperature days is expected to increase with the growing climactic instability of anthropogenic climate change. For example, the six hottest summers on record for Portland occurred between 2015 and the present.

Increasing frequency and duration of extreme heat events pose threats to human and animal life, as well as a danger to agricultural production in the Willamette Valley.

Please review Volume I, Section 2 for additional information on this hazard.

Windstorm

The HMAC determined that the City's probability for windstorm is **high** and that their vulnerability to windstorm is **moderate**. *These ratings increased since the previous version of this NHMP addendum due to the increased frequency and intensity of windstorms in recent years.*

Volume I, Section 2 describes the characteristics of windstorm hazards, history, as well as the location, extent, and probability of a potential event within the region. Because

windstorms typically occur during winter months, they are sometimes accompanied by flooding and winter storms (ice, freezing rain, and very rarely, snow). Other severe weather events that may accompany windstorms, including thunderstorms, hail, lightning strikes, and tornadoes are generally negligible for Milwaukie.

Volume I, Section 2 describes the impacts caused by windstorms, including power outages, downed trees, heavy precipitation, building damages, and storm-related debris. Additionally, transportation, and economic disruptions result as well.

Damage from high winds generally has resulted in downed utility lines, and trees usually limited to several localized areas. Electrical power can be out anywhere from a few hours to several days. Outdoor signs have also suffered damage. If the high winds are accompanied by rain (which they often are), blowing leaves, and debris clog drainage-ways, which in turn may cause localized urban flooding.

Please review Volume I, Section 2 for additional information on this hazard.

Winter Storm (Snow/Ice)

The HMAC determined that the City's probability for winter storm is **high** and that their vulnerability to winter storm is **moderate**. *These ratings did not change since the previous version of this NHMP addendum*.

Volume I, Section 2 describes the characteristics of winter storm hazards, history, as well as the location, extent, and probability of a potential event within the region. Severe winter storms can consist of rain, freezing rain, ice, snow, cold temperatures, and wind. They originate from troughs of low pressure offshore that ride along the jet stream during fall, winter, and early spring months. Severe winter storms affecting the City typically originate in the Gulf of Alaska or in the central Pacific Ocean. These storms are most common from November through March.

Most winter storms typically do not cause significant damage, but they are semi-frequent, and have the potential to impact economic activity. Road closures due to winter weather can interrupt commuter and commercial traffic, and roads that are not closed may present vehicle operators and pedestrians with dangerous conditions.

Vulnerability Assessment

Due to insufficient data and resources, Milwaukie is currently unable to perform a quantitative risk assessment, or exposure analysis, for the extreme heat, windstorm, and winter storm hazards. However, the City completed an analysis, using the best available data, as a component of the vulnerability assessment in 2009, updated in 2012, and reviewed and updated, as appropriate, in 2018 and 2023. This analysis looked at identified hazard areas in conjunction with available data on property exposed to the hazard. Exposure of community assets to natural hazards was determined by manually comparing community assets with each hazard and identifying where assets and hazards intersected.

The areas of the city that are often most at risk to severe storms are residential areas on steeper slopes, where roads may be icy and, thus, difficult to climb and descend. Road corridors leading to residential areas with fuller tree canopies are susceptible to downed tree limbs, and those areas that are above 500 feet in elevation are particularly vulnerable. However, some weather systems are characterized by a temperature inversion, where the valley floor is colder than the nearby hills. Consequently, severe storms affect the entire

city. In 2016, 2017, 2019, and 2021 the State of Oregon declared a state of emergency for severe storms. The City's Plowing, Sanding, and De-Icing Removal Plan is maintained by the Public Works Department and includes provisions to place equipment on designated principal routes throughout the City (Plowing and Sanding Routes Map). Private property owners are also required to clear the sidewalks abutting their property of snow or ice within 24 hours after the snow has stopped falling. For more information see the City's Winter Weather Response Plan information webpage.

The major risk to property results from exposed utilities, especially power lines and water pipes that are damaged by wind, broken tree limbs and cold temperatures. Businesses also suffer economic losses when they must close as the result of the inclement weather and/or the loss of power, which, in turn, disrupts the local supply chain of goods and services. Periods of extended ice coverage hinder emergency response services and limit the mobility of residents, which could result in serious life safety issues.

Residents and businesses that are in areas that exhibit the severe storm hazard face some risk of damage from severe storms. Severe weather events are expected to impact nearly all City residents. In addition, critical infrastructure, economic centers, cultural or historic assets, environmental assets, and hazardous material sites are exposed to the severe weather hazards. For a list of facilities and infrastructure vulnerable to these hazards see the Community Assets section.

The exposure of these facilities and infrastructure means that severe weather events could substantially disrupt the operations of City government buildings and fire stations, impairing key City functions, while hindering the ability of emergency response personnel to respond to emergency situations that are created by a severe storm event.

All these facilities depend upon utility lines, roads and bridges to operate and perform their respective important functions within the City. Exposed utility and power lines are particularly vulnerable to damage from severe winter storms by wind, ice and snow. Hardened infrastructure, like bridges and roads, can sustain a severe winter storm, but during the event, they are often hazardous to traverse because of icy, windy and snowy conditions.

Consequently, severe weather (wind or winter storm) could substantially disrupt numerous key resources and facilities within the city through impediments to the transportation system and damage to the power grid. Among other things, these transportation problems and power failures disrupt business operations and educational facilities, resulting in economic losses and halting educational opportunities.

Power to hazardous material sites, including gas stations, rail yards, and some industrial facilities in the city, could also be disrupted. The sites themselves could be damaged or rendered inaccessible in an especially severe storm. These conditions could pose threats to the natural environment of the city and the health of its population, while disrupting the availability of gasoline for vehicle transport.

As a result, it will be important for the City to pursue opportunities for undergrounding utilities and retrofitting utility lines so that they may withstand cold weather conditions without freezing and bursting. Adhering to current building codes for weatherization of structures, as well as current engineering and fire codes that pertain to the steepness of new roads, are also key factors for the City to consider. Business continuity planning shall

also be an important factor, given the number of economic centers and employment facilities that are threatened by the severe storm hazard.

Mitigation Activities

Mitigating severe weather can be difficult because storms affect all areas of the city, but Milwaukie has made progress to reduce the effects of storms. Milwaukie has a tree board to maintain a plan for the care of the trees as well as codes about where trees can be planted (Chapter 16.32). Most utilities are underground, and all new utilities are required to be undergrounded. In case of power outages the city's critical facilities have back up power generation. Milwaukie also has a designated snow plow and sanding routes to help expedite snow removal (Plowing and Sanding Routes Map).

Please review Volume I, Section 2 for additional information on this hazard.

Volcanic Event

The HMAC determined that the city's probability for a volcanic event is **low** and that their vulnerability to a volcanic event is **low**. The probability did not change and the vulnerability rating decreased since the previous version of this NHMP addendum. The previous HMAC considered volcanic activity to be a greater threat to Milwaukie than the current one.

Volume I, Section 2 describes the characteristics of volcanic hazards, history, as well as the location, extent, and probability of a potential event within the region. Generally, an event that affects the western portion of the County is likely to affect Milwaukie as well. Several volcanoes are located near Milwaukie, the closest of which are Mount Hood, Mount Adams, Mount Saint Helens, Mount Rainier, and the Three Sisters.

Vulnerability Assessment

Due to insufficient data and resources, Milwaukie is currently unable to perform a quantitative risk assessment, or exposure analysis, for this hazard.

Given Milwaukie's relatively long distance from volcanoes, the city is unlikely to experience the immediate effects that eruptions may have on surrounding areas (i.e., mud and debris flows, or lahars). Depending on wind patterns and which volcano erupts however, the city may experience ashfall. The eruption of Mount St. Helens in 1980, for example, coated the Willamette Valley with a fine layer of ash. In the event of an eruption on Mount Hood, the city could experience a heavier coating of ash due to its closer proximity to that volcano.

Mitigation Activities

The existing volcano hazard mitigation activities are conducted at the county, regional, state, and federal levels and are described in the Clackamas County NHMP.

Please review Volume I, Section 2 for additional information on this hazard.

Wildfire

The HMAC determined that the city's probability for wildfire is high, and that the vulnerability to wildfire is **high**. *These ratings did not change since the previous version of this NHMP addendum*.

The 2017 Clackamas County Community Wildfire Protection Plan (CWPP) was completed in May 2018. It remains the current plan as of 2023. The CWPP is hereby incorporated into this NHMP addendum by reference, and it will serve as the wildfire section for this addendum. The following presents a summary of key information; refer to the full CWPP for a complete description, and evaluation of the wildfire hazard:

<u>https://www.clackamas.us/dm/CWPP.html</u>. Information specific to Milwaukie is found in the following chapter: <u>Chapter 10.3: Clackamas Fire District #1</u>.

Volume I, Section 2 describes the characteristics of wildland fire hazards, history, as well as the location, extent, and probability of a potential event within the region. The location, and extent of a wildland fire vary depending on fuel, topography, and weather conditions. Weather, and urbanization conditions are primarily at cause for the hazard level. Milwaukie has not experienced a catastrophic wildfire within City limits. The Clackamas Fire District #1 also provides services to other cities besides Milwaukie, including: Oregon City, Happy Valley, Johnson City, and many unincorporated areas within Clackamas County.

Clackamas County has two major physiographic regions: the Willamette River Valley in western Clackamas County and the Cascade Range Mountains in eastern and southern Clackamas County. The Willamette River Valley, which includes Milwaukie, is the most heavily populated portion of the county and is characterized by flat or gently hilly topography. The Cascade Range has a relatively small population and is characterized by heavily forested slopes. Eastern Clackamas County is at higher risk to wildfire than western portions of the county due to its dense forest land. Human caused fires are responsible for most fires in Clackamas County.

Milwaukie is highly urbanized and as such does not have as much danger of wildfire within its boundaries as more rural locations in Clackamas County. The City does have parks and neighborhoods surrounded by mature trees, as well as several natural areas. Located on the edge of its southeastern boundary is the Three Creeks Natural Area, which has heavy fuels adjacent to homes and infrastructure. Three Creeks Natural Area is a designated Medium Priority Community at Risk (CARs).¹¹ Elk Rock Island, though listed as low risk for wildfire by the Oregon Wildfire Risk Explorer, is a publicly owned greenspace near a built-up residential area. The island contains dense vegetation which dries out in the summer, and has no roads, which makes firefighting operations on the island more difficult, as demonstrated by the large fire there in 2020.

Figure MA-6 (next page) shows overall wildfire risk in Milwaukie.

Most of the city has less severe (moderate or less) wildfire burn probability. This indicates expected flame lengths less than four feet under normal weather conditions.¹² However, conditions vary widely and with local topography, fuels, and local weather conditions, especially wind. Under warm, dry, windy, and drought conditions, the City expects higher likelihood of fire starts, higher intensity, more ember activity, and a more difficult to control wildfire that will include more fire effects and impacts.

Figure MA-6 Overall Wildfire Risk

Source: Oregon Wildfire Risk Explorer, date accessed February 10, 2023.

Vulnerability Assessment

Due to insufficient data and resources, Milwaukie is currently unable to perform a quantitative risk assessment, or exposure analysis, for this hazard. However, the City completed an analysis, using the best available data, as a component of the vulnerability assessment in 2009, updated in 2012, and reviewed and updated, as appropriate, in 2018 and 2023. This analysis looked at identified hazard areas in conjunction with available data on property exposed to the hazard. Exposure of community assets to natural hazards was determined by manually comparing community assets with each hazard and identifying where assets and hazards intersected.

Milwaukie does not have much vulnerability to wildfire flames, though there is always the risk of fire destroying residential and commercial areas. Vegetation along roadways can be highly dangerous, as negligent motorists provide ignition sources by tossing cigarette butts out car windows. Because schools are generally located near parks and scenic areas, they can be threatened by wildfires.

The potential community impacts, and vulnerabilities described in Volume I, Section 2 are generally accurate for the city as well. Milwaukie's fire response is addressed within the CWPP which assesses wildfire risk, maps wildland urban interface areas, and includes actions to mitigate wildfire risk. The City will update its wildfire risk assessment if the fire plan presents better data during future updates (an action item is included to participate in future updates to the CWPP).

Property can be damaged or destroyed with one fire as structures, vegetation, and other flammables easily merge to become unpredictable, and hard to manage. Other factors that affect ability to effectively respond to a wildfire include access to the location, and to water, response time from the fire station, availability of personnel, and equipment, and weather (e.g., heat, low humidity, high winds, and drought).

Although the direct threat of wildfire burning Milwaukie is low, the city is vulnerable to smoke and aerial particulate matter generated by fires in the region. The 2020 wildfire season was especially bad, with the air quality index in the Portland metropolitan area being recorded as over 500, the upper limit of that scale. The regions air quality was rated as the worst in the world during that period. Air quality is not listed as standalone hazard by FEMA or the State of Oregon for the purposes of natural hazard mitigation planning. It was, nonetheless, discussed by the Milwaukie HMAC and factored into the vulnerability rating calculation for wildfires.

Mitigation Activities

Milwaukie and Clackamas Fire District #1 (CFD#1) use several mitigation tools to reduce the city's risk to wildfires. CFD #1 provides emergency fire suppression, medical response and rescue services to the City of Milwaukie. Mutual aid agreements with neighboring jurisdictions are also in place. Water supply and storage capacity in Milwaukie conforms with recommended fire flow requirements.

The City does not allow backyard burning due to requirements of DEQ. The CFD #1 provides outreach and education to the community on wildfire mitigation via news releases, posters, signage, website messages, safety exhibits at community events, and visits to schools, civic organizations and neighborhood associations.

Clackamas Fire District #1 (CFD #1) serves the cities of Happy Valley, Johnson City, Milwaukie, and Oregon City and the unincorporated areas of Barton, Beavercreek, Boring, Carus, Carver, Central Point, Clackamas, Clarkes, Damascus, Eagle Creek, Highland, Hillsview, Holcomb, Kelso, Jennings Lodge, Oak Grove, Redland, South End, Sunnyside, and Westwood. For more information on the fire district see their addendum.

Please review the <u>2017 Clackamas County Community Wildfire Protection Plan (CWPP)</u>, Volume I, Section 2, and the Clackamas Fire District #1 Addendum in Volume II for additional information on this hazard.

WS 1. 8/1/23 Presentation

Natural Hazard Mitigation Plan Update

Dan Harris (he/they) Events & Emergency Management Coordinator harrisd@milwaukieoregon.gov

Natural Hazard Mitigation Plan

- Federally mandated document describing ten
 natural hazards
- Updated every five years with Clackamas County
- Allows Milwaukie to reflect on vulnerabilities
 - Also essential for FEMA grants

August 2023 Volume II: Milwaukie Addendum

Mission and Goals

<u>Mission</u>

Enhance county resiliency and capacity to address natural hazards by promoting sound public policy and effective mitigation strategies designed to equitably reduce risk and impacts on community members, community lifelines, historic and cultural resources, property, and ecological systems.

<u>Goals</u>

- Protect Life and Property
- Enhance Natural Systems
- Augment Emergency Services

- Encourage Partnerships for Implementation
- Promote Public Awareness
- Advance Equity and Inclusion in Mitigation Planning

Understanding Risk

Hazard Vulnerability Analysis Matrix

Hazard	History	Vulnerability	Maximum Threat	Probability	Total Threat Score	Hazard Rank	Hazard Tiers
Extreme Heat Event	16	50	90	70	226	1	Тор
Wildfire (WUI)	16	45	90	70	221	2

Landslide/Debris Flow	12	15	60	56	143	9	Bottom
Volcano	2	15	50	7	74	10	

Action Items

Multi-Hazard Action Items

- 1. Coordinate with Clackamas County, OEM, the American Red Cross, and other relevant agencies to identify shelter facilities within Milwaukie.
- 2. Increase outreach and education for hazard awareness and natural disaster preparedness, especially for lowincome, elderly, non-English speaking, and other vulnerable populations.
- 3. Maintain and enhance strategies for debris management for all hazards.
- 4. Improve and obtain resources and equipment essential for responding to and recovering from disasters.
- 5. Coordinate natural hazard related climate change action items through the Milwaukie Community Climate Action Plan.

Action Items Continued

Flood Action Item

• Evaluate alternatives for reducing the flooding hazard for properties along Kellogg Creek, Johnson Creek, Mount Scott Creek area, and the Willamette River.

Severe Weather Action Item

• Bury and protect vulnerable, critical infrastructure, such as power lines, to lessen potential failures during severe weather.

Wildfire Action Item

• Coordinate wildfire mitigation action items through the Clackamas County Community Wildfire Protection Plan.

Next Steps

August: Community feedback

September: NHMP submitted to county

October-January: County, OEM, and FEMA reviews

February: Targeted adoption date

Questions & Comments

COUNCIL STAFF REPORT

- To: Mayor and City Council Ann Ober, City Manager
- Reviewed: Ann Ober, City Manager, and Joseph Briglio, Community Development Director
 - From: Laura Weigel, Planning Manager

Subject: Joint Meeting — Planning Commission Work Program

ACTION REQUESTED

Each year Council holds a joint meeting with the Planning Commission to discuss the upcoming work program and bylaws. The Planning Commission bylaws were updated in 2021. As a result, this item is limited to a discussion of the work program.

HISTORY OF PRIOR ACTIONS AND DISCUSSIONS

On <u>April 20, 2021</u> the Council held a joint session with the Commission to discuss the 2021 workplan and proposed updates to the Commission bylaws.

On June 15, 2021 Council adopted the revised Commission bylaws.

On <u>April 19, 2022</u> the Council held a joint session with the Commission to discuss the 2022 workplan.

DISCUSSION

The Commission serves the city by reviewing and advising on matters related to planning and zoning, as set forth in the Comprehensive Plan and zoning, sign, and land division ordinances. The Commission does this by presiding over land use and development applications, guiding the development of long-range plans, and proposing updates and amendments to the Milwaukie Municipal Code (MMC) and Comprehensive Plan. Planning department staff works closely with the Commission to make progress in all these areas. The major accomplishments of the last year and the work program for the coming year are outlined below.

A. Major Accomplishments in 2022/Early 2023

The Commission worked on several significant projects since last discussing its work program with Council.

Projects included a number of state-initiated code amendments:

- House Bill (HB) 2001 Code Amendments (middle housing)
- Senate Bill (SB) 458 Code Amendments (middle housing land division)

WS64

- Climate Friendly Equitable Communities (CFEC) Rulemaking Code Updates as Required (on pause)
- HB 2180 Electric Vehicle Charging Infrastructure

Non-state-initiated projects, included:

- Downtown Design Review Standards and Process
- Residential High-Density Zoning Amendments

Date Written: July 12, 2023

WS 2. 8/1/23

OCR USE ONLY

The Commission and Council also worked on the Housing Capacity Analysis (HCA) and Housing Production Strategy (HPS) throughout 2022 and adopted both in June of 2023.

In 2022 the Commission held 21 public hearings on 17 different land use applications including:

- Comprehensive Plan Implementation
- Zoning Code Updates
- 6 Variance Requests
- 3 modifications to Community Service Use
- 1 Conditional Use
- 1 Subdivision Replat
- 1 Natural Resource Review

A joint meeting of the Commission and the Neighborhood District Associations (NDAs) was held on <u>October 11, 2022</u>. As a result of this meeting, planning staff did the following:

- Created and presented a new NDA training titled "So You've Received a Land Use Notification, Now What?" Staff is also developing a corresponding print document that will go out with Land Use notifications.
- Staff now sends the monthly Community Development Update from the City Council packet out to the NDA's.

B. 2023-2024 Work Program

The purpose of the joint meeting on August 1st between the Commission and Council is to provide an opportunity for discussion and to build a mutual understanding of goals and priorities for the next few years.

Development Review

Before discussing the numerous projects slated for 2023-2024 it is important to note that development review can account for a large amount of Commission and staff time. Development review projects are unpredictable and, as a result, long-range project progress can be impacted. That said, staff does its utmost to keep long range projects on schedule.

Comprehensive Plan Implementation Project, Phase Two

Staff has already started working on phase two of implementation:

- Kick-off the Transportation System Plan (TSP) project. In 2021 the city received a \$250,000 Transportation Growth Management (TGM) grant. Since that time Staff has been working with the Oregon Department of Transportation (ODOT) to start the project. The public kick-off of the project is expected in early Fall. The project must be complete by June 2025.
- The Neighborhood Hubs project kicked-off earlier this year. Staff is in the process of talking with property and business owners as well as community groups. An outreach event is scheduled for the fall.
 - Staff is already seeing a potential need for a Neighborhood Hubs Phase 3. If this occurs, we can discuss the timing of the work during the end of Phase 2.
- Natural Resources Assessment and Code Amendments Staff will be discussing the details of this work at an upcoming work session on September 19. The city will be hiring a consult to assist with the project, which could take up a year to complete after the consultant has been hired.
- Staff had anticipated revisiting the city's floodplain protection along with the natural resources assessment, however, based on the updates the city made to the Flood Hazard Reduction code (Title 17) in 2021 and based on the FEMA work currently underway

(National Flood Insurance Program – Endangered Species Act Integration in Oregon | FEMA.gov) that will have implications on how the city regulates the floodplain, staff recommends waiting until the new regulations are in place before conducting this work. New regulations are anticipated in 2026/2027.

Other Code Projects:

- Bicycling parking code updates Recent changes to the Oregon Transportation Planning Rule (TPR) through the CFEC Rulemaking process have disrupted the methodology the city uses to calculate the minimum number of bicycle parking spaces. Currently, the minimum number of spaces is derived from the minimum number of required vehicle parking spaces; with the elimination of minimum vehicle parking requirements, the city needs a new approach to ensure that an adequate quantity of bicycle parking spaces is provided. Additionally, for several years, staff have recognized the city's existing bicycle parking requirements (MMC Section 19.609) are insufficient to ensure standards are clear and objective and that adequate bicycle parking is provided. The standards—which have not been comprehensively evaluated since 2011—contain insufficient design and development requirements for multifamily residential development and non-residential commercial, industrial, or institutional development.
- Updates to the Land Division Code (Title 17) Staff did include updates to this section of the code as part of the middle housing requirements, however, there has been discussion about whether the land division process is taking into account the new tree code and the opportunity to divide land to save valuable trees. Based on the code fix list that staff manages, staff has also concluded that there are additional needed revisions related to consistency with the County Surveyor processing of land divisions and applicable ORS regulations, ensuring that clear and objective standards are established, improvements to application processing, and overall simplification of the land division code.

C. 2024 and Beyond

Staff anticipates revisiting the Planning Work Forecast with Council in the fall. There are a number of future projects related to Comprehensive Plan Implementation, the HPS, and potential Neighborhood Hubs work to consider. Projects may include:

- Discussion of Parks and Institutions as Community Service Uses
- Revising the Willamette Greenway zone to establish two tiers of review and create a clear and objective path for housing
- Reviewing/consolidating/updating Downtown and Central Milwaukie plans to potentially create one plan with subplans included
- Updating the Historic Resources Inventory
- Expanding floodplain protection

D. Planning Commission Bylaws

The need to streamline the city's boards and committees (BC) bylaws was discussed by Council and staff over the past several years, which resulted in a new bylaw template that was approved by Council 2021. Staff will be working with the Commission over the next year to update the bylaws to reflect recent updates to the template.

BUDGET IMPACT

The planning department has sufficient funding to carry out the objectives outlined in this report for the current biennium.

WORKLOAD IMPACT

The work for the current biennium has been assigned to specific staff and workloads are being adjusted to accommodate projects in addition to providing a high level of customer service for development review.

CLIMATE IMPACT

Several of the projects for 2023-2024 can have an impact on climate goals for the community. Updating the city's TSP which will focus on how the city can reduce vehicle miles travelled and greenhouse gas emissions and facilitate energy efficiency through improvements to the transportation system with a particular focus on prioritizing actions that will help vulnerable populations and impacted communities adapt to climate change impacts. Infrastructure improvements around Neighborhood Hub will be included in the TSP.

COORDINATION, CONCURRENCE, OR DISSENT

Planning, community development, engineering, and public works staff have a role in the work forecasted.

STAFF RECOMMENDATION

Staff recommends that the Council and Commission review and discuss the workplan.

ALTERNATIVES

None.

ATTACHMENTS

1. Planning Commission Bylaws

Attachment 2. 1.

Exhibit A

MILWAUKIE PLANNING COMMISSION BYLAWS

ARTICLE I NAME

The name of this commission is the Planning Commission (Commission).

ARTICLE II PURPOSE, AUTHORITY, AND OBJECTIVE

- A. <u>Purpose.</u> The purpose of the Commission is to serve as an advisory body to, and a resource for, the City Council in land use matters. In addition, the Commission will carry out the roles and responsibilities as assigned under Milwaukie Municipal Code (MMC) Section 2.16.010.
- B. <u>Authority.</u> The Commission is authorized by ORS 227 and MMC Chapter 2.16.
- **C.** <u>**Objective.**</u> The Commission's objectives include articulating the community's values and commitment to socially and environmentally responsible uses of its resources as reflected in the Comprehensive Plan.
- **D.** <u>**Open Meetings.**</u> All meetings of the Commission are open to the public. The Commission has the authority to conduct an executive session under ORS 192.660.

ARTICLE III MEMBERSHIP

- A. <u>Appointment.</u> Each Commission member will be appointed by the Mayor with the consent of Council, consistent with MMC 2.10.030 G. Members will serve at the pleasure of the Council.
- **B.** <u>**Term of Office.**</u> Terms are for a period of four years. Commission members may serve no more than two consecutive full terms, unless there is an interval of at least one term prior to reappointment. The Council may waive this limitation if it is in the public interest to do so.
- **C.** <u>Membership.</u> The Commission consists of seven members. No more than two members may be non-residents, and no more than two members can be engaged in the same kind of occupation, business, trade, or profession. No member may be a City of Milwaukie officer, agent, or employee; and no more than two voting members of the Commission may engage principally in the buying, selling, or developing of real estate for profit as individuals; or members of any partnership, or officers or employees of any corporation that engages principally in the buying, selling, or developing of real estate for profit.
- **D.** <u>Vacancies and Removal.</u> Vacancies are filled in the same manner as the original appointments. A member of the Commission may be removed by the appointing authority, after hearing, for misconduct or nonperformance of duty.
- E. <u>Attendance.</u> Upon failure of any member to attend three consecutive meetings, the Commission may recommend termination of that appointment to the Council, and the Council may remove the incumbent from the Commission and declare the position vacant to be filled in the manner of a regular appointment.

F. <u>**Compensation.**</u> Commission members will receive no compensation for their service, but will be fully reimbursed for all duly authorized expenses.

ARTICLE IV OFFICERS AND STAFFING

- A. <u>Officers.</u> The officers consist of a Chair and a Vice Chair who will be selected by the membership and who will serve at the pleasure of the membership for one year. Nominations and election of new officers will be taken from the floor at the Commission's first meeting of the calendar year. Officers may be re-elected. In the event that an officer is unable to complete the specified term, a special election will be held for the completion of the term.
- **B.** <u>**Chair.**</u> The Chair will preside at all deliberations and meetings of the Commission and call special meetings in accordance with these Bylaws and review Commission agendas with the staff liaison.
- **C.** <u>Vice Chair.</u> During the absence, disability, or disqualification of the Chair, the Vice Chair will exercise or perform all duties and be subject to all the responsibilities of the Chair. In the absence of the Chair and Vice Chair, the remaining members present will elect an acting Chair.
- **D.** <u>Staff.</u> The City of Milwaukie Planning Department will provide staff support to the Commission for: land use issues, meeting notifications, postponements, final disposition of matters, and other steps taken or acts performed by the Commission, which include administrative housekeeping functions such as word processing, minutes preparation, copying, and information gathering to the extent the budget permits.

ARTICLE V ORGANIZATIONAL PROCEDURES

- A. <u>Meetings.</u> The Commission will hold meetings as necessary at a time and place designated by staff consistent with Oregon Public Meetings Law. Typically, the Commission meets at least once a month on the second and/or fourth Tuesday at 6:30 p.m. at City Hall. Commission meetings will end no later than 10:00 p.m., unless extended by majority vote of the Commissioners present and participating in the Agenda item that is under consideration at that time. An extension to 10:30 p.m. is allowed by Commission action. If a meeting has not concluded at 10:30 p.m., the Commission may vote on the Agenda item, consider another extension of up to 30 minutes, or vote to continue the item to the next available meeting.
- B. <u>Quorum.</u> A quorum is four of the voting membership of the Commission. If a quorum is not attained fifteen minutes following the scheduled time of call to order, the meeting will be cancelled. In the event it is known by the Director prior to a meeting that a quorum will not be present at any meeting, the Director will notify the Commission members. All items scheduled for the meeting will be automatically continued to a regularly scheduled meeting unless the Director determines that a special meeting is needed. The Director will post notice of the continuance on the exterior doors of City Hall notifying the public of the continuance and specifying the date and time when the continued items will be before the Commission. The Notice will remain through the evening on which the meeting is originally scheduled.

- C. <u>Order of Business.</u> The Chair will have the authority to arrange the order of business as is deemed necessary to achieve an orderly and efficient meeting. In general, the order of business will be as follows:
 - 1. Call to order Procedural Matters
 - 2. Minutes
 - 3. Information Items
 - 4. Audience Participation
 - 5. Public Hearings
 - 6. Worksession Items
 - 7. Planning Department Other Business/Updates
 - 8. Planning Commission Discussion Items
 - 9. Forecast for Future Meetings.
- D. <u>Voting.</u> All members who are present at a Commission Meeting, including the Chair and Vice Chair, are allotted one vote each on all motions. The concurrence of a majority of the Commission members present will be required to decide any matter. In the case of a tie vote, the matter is not complete. One new motion may be made. If a majority vote is not obtained on that motion the agenda item fails. A motion may be made by any Commissioner with the exception of the presiding officer. All Commissioners, when a vote is taken, will vote unless he or she abstains from voting and cites the reason for the record. Staff will call the roll, altering the order of members called. The Chair will vote last.
- E. <u>Reconsideration of Actions Taken.</u> A member who voted with the majority may move for a reconsideration of an action at the same meeting only. The second of a motion may be a member of the minority. Once a matter has been reconsidered, no motion for further reconsideration will be made without unanimous consent of the Commission.
- **F.** <u>Minutes.</u> A staff representative or designee will be present at each meeting and will provide for a sound, video, or digital recording, or written minutes of each meeting. The record of the meeting, whether preserved in written minutes or sound, video, or digital recording, will include at least the following information:
 - Names of the Commission members present;
 - All motions and proposals, and their disposition;
 - The results of all votes and the vote of each Commission member by name;
 - The substance of any discussion on any matters; and,
 - A reference to any document discussed at the meeting;

Written minutes need not be a verbatim transcript, but give a true reflection of the matters discussed at the meeting and the views of the participants.

Minutes shall be reviewed and voted upon by the Commission at a regular meeting.

Upon approval of the minutes by the Commission, a staff representative will sign and make the minutes available to the public within a reasonable time after the meeting.

- **G.** <u>**Repeal or Amendments.**</u> The Commission may review these bylaws periodically and forward suggested revisions to the Council for approval. These bylaws may be repealed or amended, or new bylaws may be adopted by a majority vote of the Council on its own initiative, or upon a recommendation from the Commission.
- **H.** <u>Meeting Conduct.</u> The meeting conduct for this Commission is these bylaws except where superseded by or local, state, or federal law.
- I. <u>Statement of Economic Interest.</u> Commissioners are required to file annual statements of economic interest as required by ORS 244.050 with the Oregon Government Standards and Practices Commission.

ARTICLE VI DUTIES OF OFFICERS

- A. <u>Duties of the Chair.</u> The Chair or Vice Chair, in addition to the duties in Article IV, will preserve the order and decorum of the meeting.
 - 1. The Chair may assess the audience at the beginning of the meeting, and, with the consent of the Commission, announce reasonable time limits.
 - 2. The Chair will direct the planning staff to summarize the issues to be addressed and the criteria to be applied by the Commission during its deliberations, following the conclusion of public hearing testimony.
 - 3. The Chair will summarize the hearing results and state the appeal process_at the conclusion of the public hearing.
- B. <u>Requesting Response and Opinion.</u> The Chair will ask for response and opinion from the members of the Commission.
- **C.** <u>Appointments to Specific Projects on Committees.</u> The Chair may appoint Commissioners to specific projects or committees, and may select a Commissioner to be spokesperson for the Commission when the Chair or Vice Chair is unavailable.
- **D.** <u>**Confer with Director.**</u> The Chair or Vice Chair shall confer with the Planning Director (Director) on a regular basis outside scheduled meetings concerning the direction each expects of the Commission.
- E. <u>Orientation of New Members.</u> The Chair, in conjunction with the Director, will orient new members.

ARTICLE VII DUTIES OF THE COMMISSION

- A. <u>Duty of Commissioner.</u> Commissioners will address all those who come before the Commission in a formal and courteous manner.
- **B.** <u>Absence From a Meeting.</u> If a Commissioner is unable to attend a meeting, it is that Commissioner's responsibility to inform the Community Development staff and/or the Commission Chair of that fact prior to the meeting to be missed.

- **C.** <u>Site Visits.</u> Prior to Commission meetings, Commissioners are encouraged to visit sites that are subjects for land use actions. If a Commissioner visits a site, he or she will report on the record any information gained from the site visit that is not consistent with the information included in the application or staff report.
- **D.** <u>Method of Handling Conflicts by Members.</u> In accordance with ORS 244.135: (1) A member of the Commission will not participate in any Commission proceeding or action in which any of the following has a direct or substantial financial interest:
 - 1. The Commission or the spouse, brother, sister, child, parent, father-in-law, mother-in-law of the Commissioner; or
 - 2. Any business in which the Commissioner is then serving or has served within the previous two years; or
 - 3. Any business with which the Commissioner is negotiating for or has an arrangement or understanding concerning prospective partnership or employment.

Any actual or potential interest must be disclosed at the meeting of the Commission where the action is being taken.

- E. <u>Meeting Preparation</u>. Commissioners will prepare for participation at a meeting by fully reviewing the staff report and materials provided by the Director. If a Commissioner is unable to attend a hearing on a quasi-judicial application that is continued to another hearing, the Commissioner will not take part in the continuance hearing unless the Commissioner:
 - 1. Reviews the staff report and materials provided by the Director as well as:
 - a. all materials submitted at the hearing, and
 - b. any additional materials prepared by the planning staff applicable to the application, and
 - c. either the audio recording of the hearing or the draft minutes of the hearing.
 - 2. Declares that they are prepared to participate.
- **F.** <u>**Duties Assigned by Council.</u>** The Commission will carry out the duties assigned to it by Council relating to development, updating, and general maintenance of the Milwaukie Zoning Ordinance and the Milwaukie Comprehensive Plan.</u>
 - a. The Commission will serve as the Community Involvement Advisory Committee (CIAC). Each Commissioner will be considered appointed to the CIAC at the same time as he or she is appointed to the Commission and will serve on the CIAC for the duration of their term. The CIAC will implement the City's community involvement program pursuant to the requirements and relevant guidelines set forth in Statewide Planning Goal 1 and the Comprehensive Plan specific to land use that addresses:

- Opportunities for widespread public involvement
- Effective two-way communication with the public
- The ability for the public to be involved in all phases of the planning process
- Making technical information easy to understand
- Feedback mechanisms for policy-makers to respond to public input, and
- Adequate financial support for public involvement efforts.
- b. The Planning Commission will reserve time on every agenda to meet as needed as the CIAC, and will convene for an annual meeting.
- 2. <u>Other Duties.</u> At least once per year, the Commission will hold a meeting to which Neighborhood District Association (NDA) leaders (e.g., the NDA chair and the chair of the land use committee) <u>are</u> invited to discuss land use issues and community outreach with the Commission.

ARTICLE VIII GOALS AND OBJECTIVES

- A. <u>Annual Goal Review.</u> The Commission will review the Council goals annually for establishment of Commission goals which enhance and augment those of the Council.
- B. <u>Establishment of Commission Goals.</u> The Commission will establish goals, at a minimum, annually.

WS 2. 8/1/23 Presentation

Joint City Council & Planning Commission Work Session

August 1, 2023 Laura Weigel, Planning Manager

STATE REQUIRED CODE REVISIONS

- HB 2001 Middle housing
- SB 458 Middle housing land division
- Climate Friendly Equitable Communities
- HB 2180 Electric Vehicle Charging Infrastructure

• Housing Capacity Analysis

STAFF INITIATED CODE REVISIONS

- Downtown Design Review Standards and Process
- Residential High-Density Zoning Amendments

DEVELOPMENT REVIEW

- 6 Variance Requests
- 3 modifications to Community Service Use
- 1 Conditional Use
- 1 Subdivision Replat
- 1 Natural Resource Review

ANNUAL JOINT MEETING PC & NDA'S

- Training So, You Received a Land Use Notification. Now What?
- Information sharing NDA's now receive Community Development Update included monthly in Council's packet.

- Development Review
 - Middle Housing Application Review
 - Willamette Greenway
 - Balfour and Bowman-Brae Parks

- Comprehensive Plan Implementation
 - Neighborhood Hubs
 - Transportation System Plan
 - Natural Resources Code Update
- Other
 - Climate Friendly Equitable Communities
 - Bicycle Parking
 - House Keeping
 - Land Division

BEYOND 2024

- Discuss Parks and Institutions Zoning
- Revise the Willamette Greenway zone Review/consolidate/update Downtown and Central Milwaukie plans to potentially create one plan
- Update Historic Resources Inventory
- Expand floodplain protection
- Housing Production Strategy Implementation
 - Increase Capacity in HDR zone
 - Evaluate Incentives for Affordable Housing
 - Develop per-approved plan sets for ADU's and Middle Housing
- Unknow state required code updates

Questions/Discussion
